LOGIC

The Drill

Nicholas J.J. Smith and John Cusbert
LOGIC

The Drill

Nicholas J.J. Smith and John Cusbert
Preface

The first part of this volume contains all the exercise questions that appear in *Logic: The Laws of Truth* by Nicholas J.J. Smith (Princeton University Press, 2012). The second part contains answers to almost all of these exercises. Both the questions and the answers are a collaborative effort between Nicholas J.J. Smith and John Cusbert.

One obvious use of this work is as a solutions manual for readers of *Logic: The Laws of Truth*—but it should also be of use to readers of other logic books. Students of logic need a large number of worked examples and exercise problems with solutions: the more the better. This volume should help to meet that need.

After each question, a cross-reference of the form ‘[A p.x]’ appears. This indicates the page on which the answer to that question can be found. You can click on the cross-reference to be taken directly to the answer. Each answer then contains a cross-reference of the form ‘[Q p.x]’ which leads back to the corresponding question. Other blue items are also links: for example, clicking on an entry in the Contents pages takes you directly to the relevant section, and at the end of each exercise set and each answer set there is a link back to the Contents.

If you find any errors—or have any other comments or suggestions—please email us at:

logicthedrill@gmail.com

The latest version of this work can be found at:

Any significant revisions (e.g. corrections or additions to the exercises or answers) will be documented on the copyright page.

Questions
Chapter 1

Propositions and Arguments

Exercises 1.2.1

Classify the following as propositions or nonpropositions.

1. Los Angeles is a long way from New York. [A p.78]
2. Let’s go to Los Angeles! [A p.78]
3. Los Angeles, whoopee! [A p.78]
4. Would that Los Angeles were not so far away. [A p.78]
5. I really wish Los Angeles were nearer to New York. [A p.78]
6. I think we should go to Los Angeles. [A p.78]
8. Los Angeles is great! [A p.78]
9. If only Los Angeles were closer. [A p.78]
10. Go to Los Angeles! [A p.78]
Exercises 1.3.1

Represent the following lines of reasoning as arguments.

1. If the stock market crashes, thousands of experienced investors will lose a lot of money. So the stock market won’t crash.  

   [A p.78]

2. Diamond is harder than topaz, topaz is harder than quartz, quartz is harder than calcite, and calcite is harder than talc, therefore diamond is harder than talc.  

   [A p.79]

3. Any friend of yours is a friend of mine; and you’re friends with everyone on the volleyball team. Hence, if Sally’s on the volleyball team, she’s a friend of mine.  

   [A p.79]

4. When a politician engages in shady business dealings, it ends up on page one of the newspapers. No South Australian senator has ever appeared on page one of a newspaper. Thus, no South Australian senator engages in shady business dealings.  

   [A p.79]

Exercises 1.4.1

State whether each of the following arguments is valid or invalid.

1. All dogs are mammals.  
   All mammals are animals.  
   \[\text{All dogs are animals.}\]  

   [A p.79]

2. All dogs are mammals.  
   All dogs are animals.  
   \[\text{All mammals are animals.}\]  

   [A p.79]

3. All dogs are mammals.  
   No fish are mammals.  
   \[\text{No fish are dogs.}\]  

   [A p.79]
4. All fish are mammals.
   All mammals are robots.

   All fish are robots.  [A p.79]

Exercises 1.5.1

1. Which of the arguments in Exercise 1.4.1 are sound?  [A p.79]
2. Find an argument in Exercise 1.4.1 that has all true premises and a true conclusion but is not valid and hence not sound.  [A p.79]
3. Find an argument in Exercise 1.4.1 that has false premises and a false conclusion but is valid.  [A p.79]

Exercises 1.6.1.1

1. What is the negand of:
   (i) Bob is not a good student  [A p.80]
   (ii) I haven’t decided not to go to the party.  [A p.80]
   (iii) Mars isn’t the closest planet to the sun.  [A p.80]
   (iv) It is not the case that Alice is late.  [A p.80]
   (v) I don’t like scrambled eggs.  [A p.80]
   (vi) Scrambled eggs aren’t good for you.  [A p.80]

2. If a proposition is true, its double negation is…?  [A p.80]
3. If a proposition’s double negation is false, the proposition is…?  [A p.80]
Exercises 1.6.2.1

What are the conjuncts of the following propositions?

1. The sun is shining, and I am happy. [A p.80]
2. Maisie and Rosie are my friends. [A p.80]
3. Sailing is fun, and snowboarding is too. [A p.80]
4. We watched the movie and ate popcorn. [A p.80]
5. Sue does not want the red bicycle, and she does not like the blue one. [A p.80]
6. The road to the campsite is long and uneven. [A p.80]

Exercises 1.6.4.1

What are the (a) antecedents and (b) consequents of the following propositions?

1. If that’s pistachio ice cream, it doesn’t taste the way it should. [A p.80]
2. That tastes the way it should only if it isn’t pistachio ice cream. [A p.80]
3. If that is supposed to taste that way, then it isn’t pistachio ice cream. [A p.81]
4. If you pressed the red button, then your cup contains coffee. [A p.81]
5. Your cup does not contain coffee if you pressed the green button. [A p.81]
6. Your cup contains hot chocolate only if you pressed the green button. [A p.81]
Exercises 1.6.6

State what sort of compound proposition each of the following is, and identify its components. Do the same for the components.

1. If it is sunny and windy tomorrow, we shall go sailing or kite flying. [A p.81]

2. If it rains or snows tomorrow, we shall not go sailing or kite flying. [A p.81]

3. Either he’ll stay here and we’ll come back and collect him later, or he’ll come with us and we’ll all come back together. [A p.81]

4. Jane is a talented painter and a wonderful sculptor, and if she remains interested in art, her work will one day be of the highest quality. [A p.81]

5. It’s not the case that the unemployment rate will both increase and decrease in the next quarter. [A p.82]

6. Your sunburn will get worse and become painful if you don’t stop swimming during the daytime. [A p.82]

7. Either Steven won’t get the job, or I’ll leave and all my clients will leave. [A p.82]

8. The Tigers will not lose if and only if both Thompson and Thomson get injured. [A p.82]

9. Fido will wag his tail if you give him dinner at 6 this evening, and if you don’t, then he will bark. [A p.82]

10. It will rain or snow today—or else it won’t. [A p.83]

[Contents]
Chapter 2

The Language of Propositional Logic

Exercises 2.3.3

Using the glossary:

\[ A: \quad \text{Aristotle was a philosopher} \]
\[ B: \quad \text{Paper burns} \]
\[ F: \quad \text{Fire is hot} \]

translate the following from PL into English.

1. \( \neg A \) [A p.84]
2. \( (A \land B) \) [A p.84]
3. \( (A \land \neg B) \) [A p.84]
4. \( (\neg F \land \neg B) \) [A p.84]
5. \( \neg(F \land B) \) [A p.84]
Exercises 2.3.5

Using the glossary of Exercise 2.3.3, translate the following from PL into English.

1. \(((A \land B) \lor F)\) [A p.84]
2. \((\neg A \lor \neg B)\) [A p.84]
3. \(((A \lor B) \land \neg (A \land B))\) [A p.84]
4. \(\neg (A \lor F)\) [A p.84]
5. \((A \land (B \lor F))\) [A p.85]

Exercises 2.3.8

1. Using the glossary:

   \(B\): The sky is blue
   \(G\): Grass is green
   \(R\): Roses are red
   \(W\): Snow is white
   \(Y\): Bananas are yellow

   translate the following from PL into English.

   (i) \((W \rightarrow B)\) [A p.85]
   (ii) \((W \leftrightarrow (W \land \neg R))\) [A p.85]
   (iii) \(\neg (R \rightarrow \neg W)\) [A p.85]
   (iv) \(((R \lor W) \rightarrow (R \land \neg W))\) [A p.85]
   (v) \(((W \land W) \lor (R \land \neg B))\) [A p.85]
   (vi) \((G \lor (W \rightarrow R))\) [A p.85]
   (vii) \(((Y \leftrightarrow Y) \land (\neg Y \leftrightarrow \neg Y))\) [A p.85]
   (viii) \(((B \rightarrow W) \rightarrow (\neg W \rightarrow \neg B))\) [A p.85]
   (ix) \(((R \land W) \land B) \rightarrow (Y \lor G))\) [A p.85]
2. Translate the following from English into PL.

(i) Only if the sky is blue is snow white.  

(ii) The sky is blue if, and only if, snow is white and roses are not red.  

(iii) It’s not true that if roses are red, then snow is not white.  

(iv) If snow and roses are red, then roses are red and/or snow isn’t.  

(v) Jim is tall if and only if Maisy is, and Maisy is tall only if Nora is not.  

(vi) Jim is tall only if Nora or Maisy is.  

(vii) If Jim is tall, then either Maisy is tall or Nora isn’t.  

(viii) Either snow is white and Maisy is tall, or snow is white and she isn’t. 

(ix) If Jim is tall and Jim is not tall, then the sky both is and is not blue.  

(x) If Maisy is tall and the sky is blue, then Jim is tall and the sky is not blue. 

3. Translate the following from English into PL.

(i) If it is snowing, we are not kite flying.  

(ii) If it is sunny and it is windy, then we are sailing or kite flying. 

(iii) Only if it is windy are we kite flying, and only if it is windy are we sailing.  

(iv) We are sailing or kite flying—or skiing.  

(v) If—and only if—it is windy, we are sailing.  

(vi) We are skiing only if it is windy or snowing.  

(vii) We are skiing only if it is both windy and snowing.  

(viii) If it is sunny, then if it is windy, we are kite flying.  

(ix) We are sailing only if it is sunny, windy, and not snowing.
If it is sunny and windy, we’re sailing, and if it is snowing and not windy, we’re skiing. [A p.87]

Exercises 2.5.1

1. State whether each of the following is a wff of PL.

   (i) \( (A \rightarrow B) \)

   (ii) \( (A \rightarrow \rightarrow B) \)

   (iii) \( (A \rightarrow (A \rightarrow A)) \)

   (iv) \( A \rightarrow ((A \rightarrow A)) \)

   (v) \( ((A \land B) \land A) \)

   (vi) \( (A \lor (A \lor (A \lor (A \lor (A \lor (A \lor (A \lor (A \lor (A \lor A)))))))) \)

   (vii) \( ((AA \lor BC)) \)

   (viii) \( ((A \lor A) \land BC)) \)

   (ix) \( ABC \)

   (x) \( ((A \lor A) \land ((A \lor A) \land ((A \lor A) \land A))) \)

2. Give recursive definitions of the following.

   (i) The set of all odd numbers. [A p.88]

   (ii) The set of all numbers divisible by five. [A p.88]

   (iii) The set of all “words” (finite strings of letters) that use only (but not necessarily both of) the letters \( a \) and \( b \). [A p.88]

   (iv) The set containing all of Bob’s ancestors. [A p.88]

   (v) The set of all cackles: hah hah hah, hah hah hah hah, hah hah hah hah hah, and so on. [A p.88]
Exercises 2.5.3.1

Write out a construction for each of the following wffs, and state the main connective.

1. \( \neg P \lor (Q \land R) \)  

2. \( \neg (P \land (Q \lor R)) \)  

3. \( ((\neg P \land \neg Q) \lor \neg R) \)  

4. \( ((P \rightarrow Q) \lor (R \rightarrow S)) \)  

5. \( (((P \leftrightarrow Q) \leftrightarrow R) \leftrightarrow S) \)  

6. \( ((\neg P \land \neg \neg P) \rightarrow (P \land \neg P)) \)  

Exercises 2.5.4.1

1. For each of the remaining orderings (2–6) of the connectives \( \rightarrow, \land, \) and \( \lor \) given in §2.5.4, state which disambiguation (1–5) results from restoring parentheses to our original expression in this order.

Exercises 2.5.5.1

1. Write the following in the notation of this book:

   (i) \( \lor \neg P \land QR \)  

   (ii) \( \neg \land \lor PQR \)  

   (iii) \( \land \neg \lor PQR \)  

   (iv) \( \lor \land \neg P \land \neg Q \land \neg R \)  

   (v) \( \leftrightarrow \leftrightarrow \leftrightarrow PQRS \)  

2. Write the following in Polish notation:

   (i) \( \neg (P \land (Q \lor R)) \)
(ii) \([P \rightarrow (Q \lor R)] \rightarrow S\)  

(iii) \([(P \rightarrow Q) \lor (R \rightarrow S)]\)  

(iv) \((P \rightarrow [(Q \lor R) \rightarrow S])\)  

(v) \([\neg P \land \neg \neg P) \rightarrow (P \land \neg P)\)
Chapter 3

Semantics of Propositional Logic

Exercises 3.2.1

Determine the truth values of the following wffs, given the truth values for their basic components, which are written under those components.

1. \((\neg P \land (Q \lor R))\)  
   \begin{array}{ccc}
   T & T & F \\
   \end{array}

2. \((\neg (P \lor (Q \rightarrow R)))\)  
   \begin{array}{ccc}
   T & T & F \\
   \end{array}

3. \((\neg \neg P \land (Q \rightarrow (R \lor P)))\)  
   \begin{array}{cccc}
   F & T & T & F \\
   \end{array}

4. \((\neg \neg P \land (Q \rightarrow (R \lor P)))\)  
   \begin{array}{cccc}
   T & F & F & T \\
   \end{array}

5. \(((P \lor Q) \rightarrow (P \lor P))\)  
   \begin{array}{cccc}
   F & T & F & F \\
   \end{array}

6. \(((P \lor Q) \rightarrow (P \lor P))\)  
   \begin{array}{cccc}
   T & F & T & T \\
   \end{array}

7. \((P \rightarrow (Q \rightarrow (R \rightarrow S))))\)  
   \begin{array}{cccc}
   T & T & T & F \\
   \end{array}

8. \((P \rightarrow (Q \rightarrow (R \rightarrow S))))\)  
   \begin{array}{cccc}
   F & T & F & T \\
   \end{array}

9. \((\neg (((\neg P \leftrightarrow P) \leftrightarrow Q) \rightarrow R))\)  
   \begin{array}{cccc}
   F & F & F & F \\
   \end{array}
Exercises 3.3.1

Draw up truth tables for the following propositions.

1. \((P \land Q) \lor P\)  
2. \((P \land (P \lor P))\)  
3. \(\neg(\neg P \land \neg Q)\)  
4. \((Q \to (Q \land \neg Q))\)  
5. \((P \to (Q \to R))\)  
6. \(((P \lor Q) \leftrightarrow (P \land Q))\)  
7. \(\neg((P \land Q) \leftrightarrow Q)\)  
8. \(((P \to \neg P) \to \neg P) \to \neg P)\)  
9. \(\neg(P \land (Q \land R))\)  
10. \(((\neg R \lor S) \land (S \lor \neg T))\)

Exercises 3.4.1

Draw up a joint truth table for each of the following groups of propositions.

1. \((P \to Q) \land (Q \to P)\)  
2. \(\neg(P \leftrightarrow Q) \land ((P \lor Q) \land \neg(P \land Q))\)  
3. \(\neg(P \land \neg Q) \land \neg Q\)  
4. \(((P \to Q) \land R) \land (P \lor (Q \lor R))\)  
5. \(((P \land Q) \land (\neg R \land \neg S)) \land ((P \lor (R \to Q)) \land S)\)
6. 

\((P \land \neg P)\) and \((Q \land \neg Q)\)  

[A p.96]

7. 

\((P \lor (Q \leftrightarrow R))\) and \(((Q \rightarrow P) \land Q)\)  

[A p.96]

8. 

\(\neg((P \land Q) \land R)\) and \(((P \rightarrow Q) \leftrightarrow (P \rightarrow R))\)  

[A p.97]

9. 

\((P \lor Q), \neg P\) and \((Q \lor Q)\)  

[A p.97]

10. 

\((P \rightarrow (Q \rightarrow (R \rightarrow S)))\) and \(\neg S\)  

[A p.97]

Exercises 3.5.1

1. Can the meaning of any of our two-place connectives \((\land, \lor, \rightarrow, \leftrightarrow)\) be specified as the truth function \(f^2_2\) defined in Figure 3.2?  

[A p.98]

2. Define truth functions \(f^4_2\) and \(f^5_2\) such that the meanings of \(\land\) and \(\rightarrow\) (respectively) can be specified as these truth functions.  

[A p.98]

3. Suppose we introduce a new one-place connective \(\star\) and specify its meaning as the truth function \(f^1_1\) defined in Figure 3.2. What is the truth value of \(\star A\) when \(A\) is T?  

[A p.98]

4. What truth values do you need to know to determine the truth value of \(\star (A \rightarrow B)\)?

(i) The truth values of \(A\) and \(B\).
(ii) The truth value of \(A\) but not of \(B\).
(iii) The truth value of \(B\) but not of \(A\).
(iv) None.  

[A p.98]

5. Which of our connectives could have its meaning specified as the two-place function \(g(x, y)\) defined as follows?

\[g(x, y) = f^2_3(f^1_2(x), y)\]  

[A p.98]
Chapter 4

Uses of Truth Tables

Exercises 4.1.2

Use truth tables to determine whether each of the following arguments is valid. For any argument that is not valid, give a counterexample.

1. \( A \lor B \)
   \( A \rightarrow C \)
   \( \therefore (B \rightarrow C) \rightarrow C \)  
   [A p.99]

2. \( \neg A \)
   \( \therefore \neg((A \rightarrow B) \land (B \rightarrow C)) \lor C \)  
   [A p.99]

3. \( (A \land \neg B) \rightarrow C \)
   \( \neg C \)
   \( B \)
   \( \therefore \neg A \)  
   [A p.100]

4. \( (A \land B) \leftrightarrow C \)
   \( A \)
   \( \therefore C \rightarrow B \)  
   [A p.100]

5. \( (\neg A \land \neg B) \leftrightarrow \neg C \)
   \( \neg (A \lor B) \)
   \( \therefore C \rightarrow \neg C \)  
   [A p.100]

6. \( A \lor B \)
   \( \neg A \lor C \)
   \( B \rightarrow C \)
   \( \therefore C \)  
   [A p.101]
7. \( \neg (A \lor B) \leftrightarrow \neg C \)
   \( \neg A \land \neg B \)
   \( \therefore C \land \neg C \)  \[A \text{ p.101}\]

8. \( \neg (A \land B) \rightarrow (C \lor A) \)
   \( \neg A \lor \neg B \)
   \( A \)
   \( \therefore \neg (C \lor \neg C) \)  \[A \text{ p.101}\]

9. \( A \rightarrow (B \land C) \)
   \( B \leftrightarrow \neg C \)
   \( \therefore \neg A \)  \[A \text{ p.102}\]

10. \( A \rightarrow B \)
    \( B \rightarrow C \)
    \( \neg C \)
    \( \therefore \neg A \)  \[A \text{ p.102}\]

**Exercises 4.2.1**

Write out truth tables for the following propositions, and state whether each is a tautology, a contradiction, or neither.

1. \( ((P \lor Q) \rightarrow P) \)  \[A \text{ p.102}\]
2. \( (\neg P \land (Q \lor R)) \)  \[A \text{ p.103}\]
3. \( ((\neg P \lor Q) \leftrightarrow (P \land \neg Q)) \)  \[A \text{ p.103}\]
4. \( (P \rightarrow (Q \rightarrow (R \rightarrow P))) \)  \[A \text{ p.103}\]
5. \( (P \rightarrow ((P \rightarrow Q) \rightarrow Q)) \)  \[A \text{ p.103}\]
6. \( (P \rightarrow ((Q \rightarrow P) \rightarrow Q)) \)  \[A \text{ p.104}\]
7. \( ((P \rightarrow Q) \lor \neg (Q \land \neg Q)) \)  \[A \text{ p.104}\]
8. \( ((P \rightarrow Q) \lor \neg (Q \land \neg P)) \)  \[A \text{ p.104}\]
9. \( ((P \land Q) \leftrightarrow (Q \leftrightarrow P)) \)  \[A \text{ p.104}\]
10. \( \neg((P \land Q) \rightarrow (Q \leftrightarrow P)) \)  \[A \text{ p.104}\]
Exercises 4.3.1

Write out joint truth tables for the following pairs of propositions, and state in each case whether the two propositions are (a) jointly satisfiable, (b) equivalent, (c) contradictory, (d) contraries.

1. \((P \rightarrow Q) \text{ and } \lnot(P \land \lnot Q)\)  \[A \text{ p.105}\]
2. \((P \land Q) \text{ and } (P \land \lnot Q)\)  \[A \text{ p.105}\]
3. \(\lnot(P \leftrightarrow Q) \text{ and } \lnot(P \rightarrow Q) \lor \lnot(P \lor \lnot Q)\) \[A \text{ p.105}\]
4. \((P \rightarrow (Q \rightarrow R)) \text{ and } ((P \rightarrow Q) \rightarrow R)\) \[A \text{ p.106}\]
5. \((P \land (Q \land \lnot Q)) \text{ and } \lnot(Q \rightarrow \lnot(R \land \lnot Q))\) \[A \text{ p.106}\]
6. \((P \land \lnot P) \text{ and } (R \lor \lnot R)\) \[A \text{ p.107}\]
7. \((P \land \lnot P) \text{ and } \lnot(Q \rightarrow Q)\) \[A \text{ p.107}\]
8. \(((P \rightarrow Q) \rightarrow R) \text{ and } \lnot(P \lor \lnot(Q \land \lnot R))\) \[A \text{ p.108}\]
9. \((P \leftrightarrow Q) \text{ and } ((P \land Q) \lor (\lnot P \land \lnot Q))\) \[A \text{ p.108}\]
10. \((P \leftrightarrow Q) \text{ and } ((P \land Q) \lor (\lnot P \land \lnot Q))\) \[A \text{ p.109}\]

Exercises 4.4.1

Write out a joint truth table for the propositions in each of the following sets, and state whether each set is satisfiable.

1. \{\((P \lor Q), \lnot(P \land Q), P\)\} \[A \text{ p.109}\]
2. \{\(\lnot(P \rightarrow Q), (P \leftrightarrow Q), (\lnot P \lor Q)\)\} \[A \text{ p.109}\]
3. \{\((P \rightarrow \lnot P), (P \lor \lnot P), (\lnot P \rightarrow P)\)\} \[A \text{ p.109}\]
4. \{\((P \lor Q) \lor R), (\lnot P \rightarrow Q), (\lnot Q \rightarrow \lnot R), \lnot P\)\} \[A \text{ p.110}\]
5. \{\((P \leftrightarrow Q), (Q \lor R), (R \rightarrow P)\)\} \[A \text{ p.110}\]
6. \{\((\lnot P \rightarrow \lnot Q), (P \leftrightarrow Q), P\)\} \[A \text{ p.110}\]
7. \{\(\lnot P, (P \rightarrow (P \rightarrow P)), (\lnot P \leftrightarrow P)\)\} \[A \text{ p.110}\]
8. \{(P \lor \neg Q), (P \rightarrow R), \neg R, (\neg R \rightarrow Q)\} 

9. \{\neg R, \neg P, ((Q \rightarrow \neg Q) \rightarrow R)\} 

10. \{(\neg P \lor \neg Q), (\neg (P \land \neg Q)), (P \lor \neg Q), (\neg (\neg P \land \neg Q))\}
Chapter 5

Logical Form

Exercises 5.1.1

For each of the following propositions, give three correct answers to the question “what is the form of this proposition?”

1. \( \neg (R \rightarrow (R \rightarrow Q)) \)  
   [A p.112]
2. \( (R \lor P) \rightarrow (R \lor P) \)  
   [A p.112]
3. \( P \land (\neg P \rightarrow Q) \)  
   [A p.112]
4. \( ((\neg P \lor Q) \land P) \leftrightarrow R \)  
   [A p.112]

Exercises 5.2.1

1. The following propositions all have three logical forms in common. State what the three forms are, and in each case, show what replacements of variables by propositions are required to obtain the three propositions from the form.

   (i) \( \neg \neg C \)
   (ii) \( \neg \neg (A \land B) \)
   (iii) \( \neg \neg (C \land \neg D) \)  
   [A p.113]
2. State whether the given propositions are instances of the given form. If so, show what replacements of variables by propositions are required to obtain the proposition from the form.

(i) Form: \( \neg (\alpha \to \beta) \)

Propositions:

(a) \( \neg (P \to Q) \) \[A p.113\]
(b) \( \neg (R \to Q) \) \[A p.113\]
(c) \( \neg (R \to (R \to Q)) \) \[A p.113\]

(ii) Form: \( \neg (\alpha \to (\alpha \to \beta)) \)

Propositions:

(a) \( \neg (P \to (P \to Q)) \) \[A p.113\]
(b) \( \neg (P \to (P \to P)) \) \[A p.113\]
(c) \( \neg (P \to (Q \to P)) \) \[A p.113\]

(iii) Form: \( (\alpha \lor \beta) \to (\alpha \land \beta) \)

Propositions:

(a) \( \neg (P \lor Q) \to (\neg P \land Q) \) \[A p.113\]
(b) \( (P \lor \neg P) \to (P \land \neg P) \) \[A p.113\]
(c) \( \neg (R \lor S) \to \neg (R \land S) \) \[A p.113\]

(iv) Form: \( \alpha \lor (\neg \beta \lor \alpha) \)

Propositions:

(a) \( (P \lor Q) \lor (Q \lor (P \lor Q)) \) \[A p.113\]
(b) \( Q \lor (\neg Q \lor (Q \land Q)) \) \[A p.113\]
(c) \( \neg P \lor (\neg P \lor \neg P) \) \[A p.113\]

Exercises 5.3.1

For each of the following arguments, give four correct answers to the question “what is the form of this argument?” For each form, show what replacements of variables by propositions are required to obtain the argument from the form.

1. \( \neg (R \to (R \to Q)) \)
   \[ \therefore R \lor (R \to Q) \) \[A p.114\]
2. \((P \land Q) \rightarrow Q\)
\[\neg Q\]
\[\therefore \neg(P \land Q)\]  

3. \(\neg Q \rightarrow (R \rightarrow S)\)
\[\neg Q\]
\[\therefore R \rightarrow S\]  

4. \((P \rightarrow \neg Q) \lor (\neg Q \rightarrow P)\)
\[\neg(\neg Q \rightarrow P)\]
\[\therefore P \rightarrow \neg Q\]

**Exercises 5.4.1**

For each of the following arguments, (i) show that it is an instance of the form:

\[
\alpha \\
\alpha \rightarrow \beta \\
\therefore \beta
\]

by stating what substitutions of propositions for variables have to be made to obtain the argument from the form, and (ii) show by producing a truth table for the argument that it is valid.

1. \(P\)
\[P \rightarrow Q\]
\[\therefore Q\]  

2. \((A \land B)\)
\[(A \land B) \rightarrow (B \lor C)\]
\[\therefore (B \lor C)\]  

3. \((A \lor \neg A)\)
\[(A \lor \neg A) \rightarrow (A \land \neg A)\]
\[\therefore (A \land \neg A)\]  

4. \((P \rightarrow \neg P)\)
\[(P \rightarrow \neg P) \rightarrow (P \rightarrow (Q \land \neg R))\]
\[\therefore (P \rightarrow (Q \land \neg R))\]
Exercises 5.5.1

1. (i) Show by producing a truth table for the following argument form that it is invalid:

\[ \alpha \quad \therefore \quad \beta \]  

(ii) Give an instance of the above argument form that is valid; show that it is valid by producing a truth table for the argument.

2. While it is not true in general that every instance of an invalid argument form is an invalid argument, there are some invalid argument forms whose instances are always invalid arguments. Give an example of such an argument form.
Chapter 6

Connectives: Translation and Adequacy

Exercises 6.5.1

Translate the following arguments into PL and then assess them for validity (you may use shortcuts in your truth tables).

1. Bob is happy if and only if it is raining. Either it is raining or the sun is shining. So Bob is happy only if the sun is not shining. [A p.118]

2. If I have neither money nor a card, I shall walk. If I walk, I shall get tired or have a rest. So if I have a rest, I have money. [A p.119]

3. Maisy is upset only if there is thunder. If there is thunder, then there is lightning. Therefore, either Maisy is not upset, or there is lightning. [A p.121]

4. The car started only if you turned the key and pressed the accelerator. If you turned the key but did not press the accelerator, then the car did not start. The car did not start—so either you pressed the accelerator but did not turn the key, or you neither turned the key nor pressed the accelerator. [A p.122]

5. Either Maisy isn’t barking, or there is a robber outside. If there is a robber outside and Maisy is not barking, then she is either asleep or depressed. Maisy is neither asleep nor depressed. Hence Maisy is barking if and only if there is a robber outside. [A p.123]
6. If it isn’t sunny, then either it is too windy or we are sailing. We are having fun if we are sailing. It is not sunny and it isn’t too windy either—hence we are having fun. [A p.124]

7. Either you came through Singleton and Maitland, or you came through Newcastle. You didn’t come through either Singleton or Maitland—you came through Cessnock. Therefore, you came through both Newcastle and Cessnock. [A p.125]

8. We shall have lobster for lunch, provided that the shop is open. Either the shop will be open, or it is Sunday. If it is Sunday, we shall go to a restaurant and have lobster for lunch. So we shall have lobster for lunch. [A p.126]

9. Catch Billy a fish, and you will feed him for a day. Teach him to fish, and you’ll feed him for life. So either you won’t feed Billy for life, or you will teach him to fish. [A p.127]

10. I’ll be happy if the Tigers win. Moreover, they will win—or else they won’t. However, assuming they don’t, it will be a draw. Therefore, if it’s not a draw, and they don’t win, I’ll be happy. [A p.128]

Exercises 6.6.3

1. State whether each of the following is a functionally complete set of connectives. Justify your answers.

   (i) \{\rightarrow, \neg\} [A p.128]

   (ii) \{\leftrightarrow, \top\} [A p.129]

   (iii) \{\oplus_{15}\} (The connective \oplus_{15} is often symbolized by ↓; another common symbol for this connective is NOR.) [A p.130]

   (iv) \{\rightarrow, \land\} [A p.130]

   (v) \{\neg, \oplus_{12}\} [A p.131]

   (vi) \{\lor, \oplus_{4}\} [A p.131]

2. Give the truth table for each of the following propositions.

   (i) \(B \oplus_{14} A\) [A p.131]
(ii) \((A \oplus_{11} B) \oplus_{15} B\)  

(iii) \(\neg(A \lor (A \oplus_6 B))\)  

(iv) \(A \leftrightarrow (A \oplus_3 \neg B)\)  

(v) \((A \oplus_{12} B) \lor (B \oplus_{12} A)\)  

(vi) \((A \oplus_{12} B) \lor (B \oplus_{16} A)\)  

3. Consider the three-place connectives \(\sharp\) and \(\natural\), whose truth tables are as follows:

\[
\begin{array}{ccc|c|c}
\alpha & \beta & \gamma & \sharp(\alpha, \beta, \gamma) & \natural(\alpha, \beta, \gamma) \\
T & T & T & T & F \\
T & T & F & F & F \\
T & F & T & T & T \\
T & F & F & T & T \\
F & T & T & T & T \\
F & T & F & F & T \\
F & F & T & T & F \\
F & F & F & T & F \\
\end{array}
\]

(i) Define \(\sharp\) using only (but not necessarily all of) the connectives \(\lor, \land\), and \(\neg\).  

(ii) Do the same for \(\natural\).

4. State a proposition involving only the connectives \(\neg\) and \(\land\) that is equivalent to the given proposition.

(i) \(\neg(A \rightarrow B)\)  

(ii) \(\neg(A \lor B)\)  

(iii) \(\neg A \lor \neg B\)  

(iv) \(\neg(\neg A \lor B)\)  

(v) \(A \leftrightarrow B\)  

(vi) \((A \rightarrow B) \lor (B \rightarrow A)\)

5. (i) What is the dual of \(\oplus_1\)?  

(ii) What is the dual of \(\rightarrow\)?  

(iii) Which one-place connectives are their own duals?  

(iv) Which two-place connectives are their own duals?
Chapter 7

Trees for Propositional Logic

Exercises 7.2.1.1

Apply the appropriate tree rule to each of the following propositions.

1. \((\neg A \lor \neg B)\)  
2. \((\neg A \rightarrow B)\)  
3. \(((A \rightarrow B) \land B)\)  
4. \(((A \leftrightarrow B) \leftrightarrow B)\)  
5. \((\neg A \leftrightarrow \neg \neg A)\)  
6. \((\neg \neg A \lor B)\)

Exercises 7.2.2.1

Construct finished trees for each of the following propositions.

1. \(((A \rightarrow B) \rightarrow B)\)  
2. \(((A \rightarrow B) \lor (B \rightarrow A))\)  
3. \((\neg \neg A \rightarrow (A \lor B))\)  
4. \((\neg \neg ((A \land B) \lor (A \land \neg B)))\)
Exercises 7.2.3.1

Construct finished trees for each of the following propositions; close paths as appropriate.

1. \( \neg(A \rightarrow (B \rightarrow A)) \) \[A p.136\]
2. \( ((A \rightarrow B) \lor (\neg A \lor B)) \) \[A p.136\]
3. \( \neg((A \rightarrow B) \lor (\neg A \lor B)) \) \[A p.136\]
4. \( \neg\neg\neg(A \lor B) \) \[A p.136\]
5. \( \neg(A \land \neg A) \) \[A p.136\]
6. \( \neg(\neg A \land B) \leftrightarrow (\neg A \lor \neg B) \) \[A p.137\]

Exercises 7.3.1.1

Using trees, determine whether the following arguments are valid. For any arguments that are invalid, give a counterexample.

1. \( A \)
   \[ \therefore (A \lor B) \) \[A p.137\]
2. \( (A \lor B) \)
   \[ \therefore B \) \[A p.137\]
3. \( (A \lor B) \)
   \( (A \rightarrow C) \)
   \( (B \rightarrow D) \)
   \[ \therefore (C \lor D) \) \[A p.138\]
4. \( ((A \lor \neg B) \rightarrow C) \)
   \( (B \rightarrow \neg D) \)
   \( D \)
   \[ \therefore C \) \[A p.138\]
5. \( B \)
   \( (A \rightarrow B) \)
   \[ \therefore A \) \[A p.138\]
Exercises 7.3.2.1

1. Using trees, test whether the following propositions are contradictions. For any proposition that is satisfiable, read off from an open path a scenario in which the proposition is true.

   (i) \( A \land \neg A \) 
   (ii) \( (A \lor B) \land \neg(A \lor B) \)
   (iii) \( (A \implies B) \land \neg(A \lor B) \)
   (iv) \( (A \implies \neg(A \lor B)) \land \neg(\neg(A \lor B) \lor B) \)
   (v) \( \neg((\neg B \lor C) \iff (B \implies C)) \)
   (vi) \( (A \iff \neg A) \lor (A \implies \neg(B \lor C)) \)
2. Using trees, test whether the following sets of propositions are satisfiable. For any set that is satisfiable, read off from an open path a scenario in which all the propositions in the set are true.

(i) \{ (A \lor B), \neg B, (A \rightarrow B) \}  \hspace{1cm} \text{[A p.142]}

(ii) \{ (A \lor B), (B \lor C), \neg (A \lor C) \}  \hspace{1cm} \text{[A p.142]}

(iii) \{ \neg (\neg A \rightarrow B), \neg (C \leftrightarrow A), (A \lor C), \neg (C \rightarrow B), (A \rightarrow B) \}  \hspace{1cm} \text{[A p.143]}

(iv) \{ (A \leftrightarrow B), \neg (A \rightarrow C), (C \rightarrow A), (A \land B) \lor (A \land C) \}  \hspace{1cm} \text{[A p.143]}

Exercises 7.3.3.1

Test whether the following pairs of propositions are contraries, contradictions, or jointly satisfiable.

1. \( \neg A \rightarrow B \) and \( B \rightarrow A \)  \hspace{1cm} \text{[A p.144]}

2. \( A \rightarrow B \) and \( \neg (A \rightarrow (A \rightarrow B)) \)  \hspace{1cm} \text{[A p.144]}

3. \( \neg (A \leftrightarrow \neg B) \) and \( \neg (A \lor \neg B) \)  \hspace{1cm} \text{[A p.145]}

4. \( \neg (A \lor \neg B) \) and \( \neg A \rightarrow \neg B \)  \hspace{1cm} \text{[A p.146]}

5. \( \neg A \land (A \rightarrow B) \) and \( \neg (\neg A \rightarrow (A \rightarrow B)) \)  \hspace{1cm} \text{[A p.147]}

6. \( (A \rightarrow B) \leftrightarrow B \) and \( \neg (A \rightarrow B) \)  \hspace{1cm} \text{[A p.147]}

Exercises 7.3.4.1

Test whether the following propositions are tautologies. (Remember to restore outermost parentheses before adding the negation symbol at the front—recall §2.5.4.) For any proposition that is not a tautology, read off from your tree a scenario in which it is false.

1. \( A \rightarrow (B \rightarrow A) \)  \hspace{1cm} \text{[A p.148]}

2. \( A \rightarrow (A \rightarrow B) \)  \hspace{1cm} \text{[A p.148]}

30
3. \(((A \land B) \lor \neg(A \rightarrow B)) \rightarrow (C \rightarrow A)\)  

4. \((A \land (B \lor C)) \leftrightarrow ((A \land B) \lor (A \land C))\)  

5. \(\neg A \lor \neg(A \land B)\)  

6. \(A \lor (\neg A \land \neg B)\)  

7. \((A \rightarrow B) \lor (A \land \neg B)\)  

8. \((B \land \neg A) \leftrightarrow (A \leftrightarrow B)\)  

9. \((A \lor (B \lor C)) \leftrightarrow ((A \lor B) \lor C)\)  

10. \((A \land (B \lor C)) \leftrightarrow ((A \lor B) \land C)\)  

**Exercises 7.3.5.1**

Test whether the following are equivalent. Where the two propositions are not equivalent, read off from your tree a scenario in which they have different truth values.

1. \(P\) and \((P \land P)\)  

2. \((P \rightarrow (Q \lor \neg Q))\) and \((R \rightarrow R)\)  

3. \(\neg(A \lor B)\) and \((\neg A \land \neg B)\)  

4. \(\neg(A \lor B)\) and \((\neg A \lor \neg B)\)  

5. \(\neg(A \land B)\) and \((\neg A \land \neg B)\)  

6. \(\neg(A \land B)\) and \((\neg A \lor \neg B)\)  

7. \(A\) and \(((A \land B) \lor (A \land \neg B))\)  

8. \(\neg(P \leftrightarrow Q)\) and \(((P \land \neg Q) \lor (\neg P \land Q))\)  

9. \(((P \land Q) \rightarrow R)\) and \((P \rightarrow (\neg Q \lor R))\)  

10. \(\neg(P \leftrightarrow Q)\) and \((Q \land \neg P)\)
Chapter 8

The Language of Monadic Predicate Logic

Exercises 8.2.1

Translate the following propositions from English into MPL:

1. The Pacific Ocean is beautiful.          [A p.156]
2. New York is heavily populated.           [A p.156]
3. Mary is nice.                            [A p.156]
5. Seven is a prime number.                [A p.157]
6. Pluto is a planet.                       [A p.157]
7. Bill and Ben are gardeners
6. If Mary is sailing or Jenny is kite flying, then Bill and Ben are grumpy. [A p.157]
9. Mary is neither sailing nor kite flying. [A p.157]
10. Only if Mary is sailing is Jenny kite flying. [A p.157]
11. John is sailing or kite flying but not both. [A p.157]
12. If Mary isn’t sailing, then unless he’s kite flying, John is sailing. [A p.157]
13. Jenny is sailing only if both Mary and John are. [A p.157]
14. Jenny is sailing if either John or Mary is. [A p.157]
15. If—and only if—Mary is sailing, Jenny is kite flying. [A p.157]
16. If Steve is winning, Mary isn’t happy. [A p.157]
17. Two is prime, but it is also even. [A p.157]
18. Canberra is small—but it’s not tiny, and it’s a capital city. [A p.157]
19. If Rover is kite flying, then two isn’t prime. [A p.157]
20. Mary is happy if and only if Jenny isn’t. [A p.157]

Exercises 8.3.2

Translate the following from English into MPL.

1. If Independence Hall is red, then something is red. [A p.158]
2. If everything is red, then Independence Hall is red. [A p.158]
3. Nothing is both green and red. [A p.158]
4. It is not true that nothing is both green and red. [A p.158]
6. All red things are heavy or expensive. [A p.158]
7. All red things that are not heavy are expensive. [A p.158]
8. All red things are heavy, but some green things aren’t. [A p.158]
9. All red things are heavy, but not all heavy things are red. [A p.158]
10. Some red things are heavy, and furthermore some green things are heavy too. [A p.158]
11. Some red things are not heavy, and some heavy things are not red. [A p.158]
12. If Kermit is green and red, then it is not true that nothing is both green and red. [A p.159]

13. Oscar’s piano is heavy, but it is neither red nor expensive. [A p.159]

14. If Spondulix is heavy and expensive, and all expensive things are red and all heavy things are green, then Spondulix is red and green.¹ [A p.159]

15. If Kermit is heavy, then something is green and heavy. [A p.159]

16. If everything is fun, then nothing is worthwhile. [A p.159]

17. Some things are fun and some things are worthwhile, but nothing is both. [A p.159]

18. Nothing is probable unless something is certain. [A p.159]

19. Some things are probable and some aren’t, but nothing is certain. [A p.159]

20. If something is certain, then it’s probable. [A p.159]

Exercises 8.3.5

Translate the following propositions from English into MPL.

1. Everyone is happy. [A p.159]

2. Someone is sad. [A p.159]

3. No one is both happy and sad. [A p.159]

4. If someone is sad, then not everyone is happy. [A p.159]

5. No one who isn’t happy is laughing. [A p.160]

6. If Gary is laughing, then someone is happy. [A p.160]

7. Whoever is laughing is happy. [A p.160]

¹“Spondulix” is the name of a famous gold nugget, found in 1872.
8. Everyone is laughing if Gary is. [A p.160]
9. Someone is sad, but not everyone and not Gary. [A p.160]
10. Gary isn’t happy unless everyone is sad. [A p.160]
11. All leaves are brown and the sky is gray. [A p.160]
12. Some but not all leaves are brown. [A p.160]
13. Only leaves are brown. [A p.160]
15. Everyone is in trouble unless Gary is happy. [A p.160]
16. Everyone who works at this company is in trouble unless Gary is happy. [A p.160]
17. If Stephanie is telling the truth, then someone is lying. [A p.160]
18. If no one is lying, then Stephanie is telling the truth. [A p.160]
19. Either Stephanie is lying, or no-one’s telling the truth and everyone is in trouble. [A p.160]
20. If Gary is lying, then not everyone in this room is telling the truth. [A p.160]

Exercises 8.4.3.1

Write out a construction for each of the following wffs, and state the main operator.

1. ∀x(Fx → Gx) [A p.161]
2. ∀x¬Gx [A p.161]
3. ¬∃x(Fx ∧ Gx) [A p.161]
4. (Fa ∧ ¬∃x¬Fx) [A p.161]
5. ∀x(Fx ∧ ∃y(Gx → Gy)) [A p.162]
6. \( (\forall x (Fx \rightarrow Gx) \land Fa) \) [A p.162]
7. \( ((\neg Fa \land \neg Fb) \rightarrow \forall x \neg Fx) \) [A p.162]
8. \( \forall x \forall y ((Fx \land Fy) \rightarrow Gx) \) [A p.163]
9. \( \forall x (Fx \rightarrow \forall y Fy) \) [A p.163]
10. \( (\forall x Fx \rightarrow \forall y Fy) \) [A p.163]

**Exercises 8.4.5.1**

Identify any free variables in the following formulas. State whether each formula is open or closed.

1. \( Tx \land Fx \) [A p.163]
2. \( Tx \land Ty \) [A p.163]
3. \( \exists x Tx \land \exists x Fx \) [A p.163]
4. \( \exists x Tx \land \forall y Fx \) [A p.163]
5. \( \exists x Tx \land Fx \) [A p.164]
6. \( \exists x (Tx \land Fx) \) [A p.164]
7. \( \forall y \exists x Ty \) [A p.164]
8. \( \exists x (\forall x Tx \rightarrow \exists y Fx) \) [A p.164]
9. \( \exists y \forall x Tx \rightarrow \exists y Fx \) [A p.164]
10. \( \forall x (\exists x Tx \land Fx) \) [A p.164]
11. \( \forall x \exists x Tx \land Fx \) [A p.164]
12. \( \exists x Ty \) [A p.164]
13. \( \forall x Tx \rightarrow \exists x Fx \) [A p.164]
14. \( \exists x \forall y (Tx \lor Fy) \) [A p.164]
15. \( \forall x Fx \land Gx \) [A p.164]
16. \( \forall x \forall y FX \rightarrow Gy \)  
17. \( \forall x \forall y (Fx \rightarrow \forall x Gy) \)  
18. \( \exists yGb \land Gc \)  
19. \( \exists yGy \land \forall x (Fx \rightarrow Gy) \)  
20. \( \forall x((Fx \rightarrow \exists xGx) \land Gx) \)
Chapter 9

Semantics of Monadic Predicate Logic

Exercises 9.1.1

For each of the propositions:

(i) \( Pa \)  
(ii) \( \exists xPx \)  
(iii) \( \forall xPx \)

state whether it is true or false on each of the following models.

1. Domain: \( \{1, 2, 3, \ldots \} \) \(^2\)
   Referent of \( a \): 1
   Extension of \( P \): \( \{1, 3, 5, \ldots \} \) \(^3\)  
   \[ A \text{ p.165} \]

2. Domain: \( \{1, 2, 3, \ldots \} \)
   Referent of \( a \): 1
   Extension of \( P \): \( \{2, 4, 6, \ldots \} \) \(^4\)  
   \[ A \text{ p.165} \]

3. Domain: \( \{1, 2, 3, \ldots \} \)
   Referent of \( a \): 2
   Extension of \( P \): \( \{1, 3, 5, \ldots \} \)  
   \[ A \text{ p.165} \]

4. Domain: \( \{1, 2, 3, \ldots \} \)
   Referent of \( a \): 2
   Extension of \( P \): \( \{2, 4, 6, \ldots \} \)  
   \[ A \text{ p.165} \]

\(^2\)That is, the set of positive integers.  
\(^3\)That is, the set of odd numbers.  
\(^4\)That is, the set of even numbers.
5. Domain: \{1, 2, 3, \ldots \}
   Referent of \(a\): 1
   Extension of \(P\): \{1, 2, 3, \ldots \}  \[A \ p.165\]

6. Domain: \{1, 2, 3, \ldots \}
   Referent of \(a\): 2
   Extension of \(P\): \(\emptyset\)  \[A \ p.165\]

Exercises 9.2.1

State whether each of the following propositions is true or false in each of the six models given in Exercises 9.1.1.

(i) \((\neg Pa \land \neg Pa)\)
(ii) \((\neg Pa \rightarrow Pa)\)
(iii) \((Pa \leftrightarrow \exists xPx)\)
(iv) \((\exists xPx \lor \neg Pa)\)
(v) \((\neg (\forall xPx \land \neg \exists xPx)\)  \[Answers \ p.165\]

Exercises 9.3.1

1. If \(a(x)\) is \((Fx \land Ga)\), what is
   (i) \(a(a/x)\)  \[A \ p.166\]
   (ii) \(a(b/x)\)  \[A \ p.166\]

2. If \(a(x)\) is \(\forall y(Fx \rightarrow Gy)\), what is
   (i) \(a(a/x)\)  \[A \ p.166\]
   (ii) \(a(b/x)\)  \[A \ p.166\]

3. If \(a(x)\) is \(\forall x(Fx \rightarrow Gx) \land Fx\), what is
   (i) \(a(a/x)\)  \[A \ p.166\]
4. If \( \alpha(x) \) is \( \forall x(Fx \land Ga) \), what is
   (i) \( \alpha(a/x) \) [A p.166]
   (ii) \( \alpha(b/x) \) [A p.166]

5. If \( \alpha(y) \) is \( \exists x(Gx \rightarrow Gy) \), what is
   (i) \( \alpha(a/y) \) [A p.166]
   (ii) \( \alpha(b/y) \) [A p.166]

6. If \( \alpha(x) \) is \( \exists y(\forall x(Fx \rightarrow Fy) \lorFx) \), what is
   (i) \( \alpha(a/x) \) [A p.166]
   (ii) \( \alpha(b/x) \) [A p.166]

Exercises 9.4.3

1. Here is a model:
   Domain: \( \{1,2,3,4\} \)
   Extensions: \( E: \{2,4\} \) \( O: \{1,3\} \)
   State whether each of the following propositions is true or false in this model.
   (i) \( \forall xEx \) [A p.167]
   (ii) \( \forall x(Ex \lor Ox) \) [A p.167]
   (iii) \( \exists xEx \) [A p.167]
   (iv) \( \exists x(Ex \land Ox) \) [A p.167]
   (v) \( \forall x(\neg Ex \rightarrow Ox) \) [A p.167]
   (vi) \( \forall xEx \lor \exists x\neg Ex \) [A p.167]

2. State whether the given proposition is true or false in the given models.
   (i) \( \forall x(Px \lor Rx) \)
      (a) Domain: \( \{1,2,3,4,5,6,7,8,9,10\} \)
          Extensions: \( P: \{1,2,3\} \) \( R: \{5,6,7,8,9,10\} \) [A p.167]
(b) Domain: \{1, 2, 3, 4, 5, 6, 7, 8, 9, 10\}  
Extensions: \(P: \{1, 2, 3, 4\} \quad R: \{4, 5, 6, 7, 8, 9, 10\}\)  

(ii) \(\exists x (\neg Px \leftrightarrow (Qx \land \neg Rx))\)

(a) Domain: \{1, 2, 3, \ldots\}  
Extensions: \(P: \{2, 4, 6, \ldots\} \quad Q: \{1, 3, 5, \ldots\} \quad R: \{2, 4, 6, \ldots\}\)  

(b) Domain: \{1, 2, 3, \ldots\}  
Extensions: \(P: \{2, 4, 6, \ldots\} \quad Q: \{2, 4, 6, \ldots\} \quad R: \{1, 3, 5, \ldots\}\)

(iii) \(\exists x Px \land Ra\)

(a) Domain: \{1, 2, 3, \ldots\}  
Referent of \(a\): 7  
Extensions: \(P: \{2, 3, 5, 7, 11, \ldots\} \quad R: \{1, 3, 5, \ldots\}\)  

(b) Domain: \{Alice, Ben, Carol, Dave\}  
Referent of \(a\): Alice  
Extensions: \(P: \{Alice, Ben\} \quad R: \{Carol, Dave\}\)

3. Here is a model:

\[\text{Domain: \{Bill, Ben, Alison, Rachel\}}\]
\[\text{Referents: } a: \text{Alison} \quad r: \text{Rachel}\]
\[\text{Extensions: } M: \{\text{Bill, Ben}\} \quad F: \{\text{Alison, Rachel}\}\]
\[\text{J: \{Bill, Alison\}} \quad S: \{\text{Ben, Rachel}\}\]

State whether each of the following propositions is true or false in this model.

(i) \((Ma \land Fr) \rightarrow \exists x (Mx \land Fx)\)  
(ii) \(\forall x \forall y (Mx \rightarrow My)\)  
(iii) \((\neg Ma \lor \neg Jr) \rightarrow \exists x \exists y (Mx \land Fy)\)

(iv) \(\forall x Mx \rightarrow \forall x Jx\)  
(v) \(\exists x \exists y (Mx \land Fy \land Sr)\)  
(vi) \(\exists x (Fx \land Sx) \rightarrow \forall x (Fx \rightarrow Sx)\)

\[\text{A p.167}\]

---

\(^5\text{That is, the set of prime numbers.}\)
4. For each of the following propositions, describe (a) a model in which it is true, and (b) a model in which it is false. If there is no model of one of these types, explain why.

(i) \( \forall x (Fx \rightarrow Gx) \) [A p.167]
(ii) \( \forall x (Fx \land \neg Fa) \) [A p.167]
(iii) \( \exists x (Fx \land \neg Fa) \) [A p.168]
(iv) \( \exists x (Fx \land Gx) \) [A p.168]
(v) \( \forall x (Fx \rightarrow Fx) \) [A p.168]
(vi) \( \exists x (Fx \land \exists x Gx) \) [A p.168]
(vii) \( \forall x Fx \rightarrow \exists x Fx \) [A p.168]
(viii) \( \exists x (Fx \land \neg Fx) \) [A p.168]
(ix) \( \exists x (Fx \land \exists x \neg Fx) \) [A p.168]
(x) \( \exists x (Fx \rightarrow Fx) \) [A p.169]
(xi) \( \exists x Fx \rightarrow \exists x Gx \) [A p.169]
(xii) \( \exists x Fx \rightarrow \forall x Gx \) [A p.169]
(xiii) \( \forall x Fx \rightarrow Fa \) [A p.169]
(xiv) \( \forall x (Fx \rightarrow Fa) \) [A p.169]
(xv) \( Fa \rightarrow Fb \) [A p.169]
(xvi) \( \forall x (Fx \lor Gx) \) [A p.170]
(xvii) \( \exists x (Fx \lor Gx) \) [A p.170]
(xviii) \( \forall x (Fx \land \neg Fx) \) [A p.170]
(xix) \( \forall x \exists y (Fx \rightarrow Gy) \) [A p.170]
(xx) \( \forall x (Fx \rightarrow \exists y Gy) \) [A p.170]

5. (i) Is \( \forall x (Fx \rightarrow Gx) \) true or false in a model in which the extension of \( F \) is the empty set? [A p.170]

(ii) Is \( \exists x (Fx \land Gx) \) true in every model in which \( \forall x (Fx \rightarrow Gx) \) is true? [A p.170] [Contents]
Exercises 9.5.1

For each of the following arguments, either produce a countermodel (thereby showing that the argument is invalid) or explain why there cannot be a countermodel (in which case the argument is valid).

1. $\exists x Fx \land \exists x Gx$
   $\therefore \exists x (Fx \land Gx)$
   [A p.171]

2. $\exists x (Fx \land Gx)$
   $\therefore \exists x Fx \land \exists x Gx$
   [A p.171]

3. $\forall x (Fx \lor Gx)$
   $\neg \forall x Fx$
   $\therefore \forall x Gx$
   [A p.171]

4. $\forall x (Fx \rightarrow Gx)$
   $\forall x (Gx \rightarrow Hx)$
   $\therefore \forall x (Fx \rightarrow Hx)$
   [A p.171]

5. $\forall x (Fx \rightarrow Gx)$
   $\forall x (Gx \rightarrow Hx)$
   $\therefore \forall x (Hx \rightarrow Fx)$
   [A p.171]

[Contents]
Chapter 10

Trees for Monadic Predicate Logic

Exercises 10.2.2

1. Using trees, determine whether the following propositions are logical truths. For any proposition that is not a logical truth, read off from your tree a model in which it is false.

   (i) $F a \rightarrow \exists x F x$ [A p.172]
   (ii) $\exists x F x \rightarrow \neg \forall x \neg F x$ [A p.172]
   (iii) $\forall x ((F x \land \neg G x) \rightarrow \exists x G x)$ [A p.173]
   (iv) $\forall x F x \rightarrow \exists x F x$ [A p.173]
   (v) $(F a \land (F b \land F c)) \rightarrow \forall x F x$ [A p.173]
   (vi) $\exists x F x \land \exists x \neg F x$ [A p.174]
   (vii) $\exists x (F x \rightarrow \forall y F y)$ [A p.174]
   (viii) $\forall x (F x \rightarrow G x) \rightarrow (F a \rightarrow G a)$ [A p.174]
   (ix) $\neg \forall x (F x \land G x) \leftrightarrow \exists x \neg (F x \land G x)$ [A p.175]
   (x) $\neg \exists x (F x \land G x) \leftrightarrow \forall x (\neg F x \land \neg G x)$ [A p.175]

2. Using trees, determine whether the following arguments are valid. For any argument that is not valid, read off from your tree a model in which the premises are true and the conclusion false.

   (i) $\exists x F x \land \exists x G x$
      \[ \therefore \exists x (F x \land G x) \] [A p.176]
   (ii) $\exists x \forall y (F x \rightarrow G y)$
      \[ \therefore \forall y \exists x (F x \rightarrow G y) \] [A p.176]
(iii) $Fa \rightarrow \forall x Gx$
   \[ \therefore \forall x(Fa \rightarrow Gx) \quad [A \ p.177] \]

(iv) $Fa \rightarrow \forall x Gx$
    \[ \therefore \exists x(Fa \rightarrow Gx) \quad [A \ p.177] \]

(v) $\forall x(Fx \lor Gx)$
   \[ \therefore \neg \forall x Fx \]
   \[ \therefore \forall x Gx \quad [A \ p.177] \]

(vi) $\exists x(Fx \land Gx)$
    \[ \therefore \exists x Fx \land \exists x Gx \quad [A \ p.178] \]

(vii) $\forall x(Fx \rightarrow Gx)$
   \[ Fa \]
   \[ \therefore Ga \quad [A \ p.178] \]

(viii) $\neg \forall x(Fx \lor Gx)$
    \[ \therefore \exists x(\neg Fx \land \neg Gx) \quad [A \ p.178] \]

(ix) $\forall x(Fx \rightarrow Gx)$
     \[ \forall x(Gx \rightarrow Hx) \]
     \[ \therefore \neg \exists x(\neg Fx \land Hx) \quad [A \ p.179] \]

(x) $\forall x(Fx \lor Gx)$
    \[ \therefore \neg \exists x(Fx \land Gx) \quad [A \ p.179] \]
    

Exercises 10.3.8

Translate the following arguments into MPL, and then test for validity using trees. For any argument that is not valid, read off from your tree a model in which the premise(s) are true and the conclusion false.

1. All dogs are mammals. All mammals are animals. Therefore, all dogs are animals.  
   
   [A p.180]

2. If everything is frozen, then everything is cold. So everything frozen is cold.  
   
   [A p.181]

3. If a thing is conscious, then either there is a divine being, or that thing has a sonic screwdriver. Nothing has a sonic screwdriver. Thus, not everything is conscious.  
   
   [A p.182]

4. All cows are scientists, no scientist can fly, so no cow can fly.  
   
   [A p.183]
5. Someone here is not smoking. Therefore, not everyone here is smoking. [A p.184]

6. If Superman rocks up, all cowards will shake. Catwoman is not a coward. So Catwoman will not shake. [A p.185]

7. Each car is either red or blue. All the red cars are defective, but some of the blue cars aren’t. Thus, there are some defective cars and some nondefective cars. [A p.186]

8. For each thing, it swims only if there is a fish. Therefore, some things don’t swim. [A p.187]

9. All robots built before 1970 run on kerosene. Autovac 23E was built before 1970, but it doesn’t run on kerosene. So it’s not a robot. [A p.188]

10. Everyone who is tall is either an athlete or an intellectual. Some people are athletes and intellectuals, but none of them is tall. Graham is a person. Therefore, if he’s an athlete, then either he’s not an intellectual, or he isn’t tall. [A p.189]
Chapter 11

Models, Propositions, and Ways the World Could Be

There are no exercises for chapter 11.
Chapter 12

General Predicate Logic

Exercises 12.1.3.1

State whether each of the following is a wff of GPL.

1. $\forall x F^1 y$ [A p.191]
2. $\forall x \exists y F^1 y$ [A p.191]
3. $\forall x R^2 xy$ [A p.191]
4. $\forall x \exists x R^2 yy$ [A p.191]
5. $R^2 x$ [A p.191]
6. $\forall x R^2 x$ [A p.191]
7. $\forall x (F^1 x \to R^2 x)$ [A p.191]
8. $\forall x \exists y (F^1 x \to R^2 xy)$ [A p.191]
9. $\forall x \exists y (F^1 xy \to R^2 y)$ [A p.191]
10. $\forall x \exists y \forall x \exists y R^2 xy$ [A p.191]
Exercises 12.1.6

Translate the following into GPL.

1. Bill heard Alice.  
2. Bill did not hear Alice.  
3. Bill heard Alice, but Alice did not hear Bill.  
4. If Bill heard Alice, then Alice heard Bill.  
5. Bill heard Alice if and only if Alice heard Alice.  
6. Bill heard Alice, or Alice heard Bill.  
7. Clare is taller than Dave, but she’s not taller than Edward.  
8. Mary prefers Alice to Clare.  
9. Mary doesn’t prefer Dave to Clare; nor does she prefer Clare to Dave.  
10. Edward is taller than Clare, but he’s not tall.  
11. The Eiffel tower is taller than both Clare and Dave.  
12. If Dave is taller than the Eiffel tower, then he’s tall.  
13. Although the Eiffel tower is taller, Clare prefers Dave.  
14. If Alice is taller than Dave, then he prefers himself to her.  
15. Dave prefers Edward to Clare only if Edward is taller than the Eiffel tower.  
16. Dave prefers Edward to Clare only if she’s not tall.  
17. Mary has read Fiesta, and she likes it.  
18. Dave doesn’t like Fiesta, but he hasn’t read it.  
19. If Dave doesn’t like The Bell Jar, then he hasn’t read it.  
20. Dave prefers The Bell Jar to Fiesta, even though he hasn’t read either.

Exercises 12.1.9

Translate the following into GPL.

1. (i) Something is bigger than everything.  [A p.193]
(ii) Something is such that everything is bigger than it.  [A p.193]
(iii) If Alice is bigger than Bill, then something is bigger than Bill.  [A p.193]
(iv) If everything is bigger than Bill, then Alice is bigger than Bill.  [A p.193]
(v) If something is bigger than everything, then something is bigger than itself.  [A p.193]
(vi) If Alice is bigger than Bill and Bill is bigger than Alice, then everything is bigger than itself.  [A p.193]
(vii) There is something that is bigger than anything that Alice is bigger than.  [A p.193]
(viii) Anything that is bigger than Alice is bigger than everything that Alice is bigger than.  [A p.193]
(ix) Every room contains at least one chair.  [A p.193]
(x) In some rooms some of the chairs are broken; in some rooms all of the chairs are broken; in no room is every chair unbroken.  [A p.193]

2. (i) Every person owns a dog.  [A p.194]
(ii) For every dog, there is a person who owns that dog.  [A p.194]
(iii) There is a beagle that owns a chihuahua.  [A p.194]
(iv) No beagle owns itself.  [A p.194]
(v) No chihuahua is bigger than any beagle.  [A p.194]
(vi) Some chihuahuas are bigger than some beagles.  [A p.194]
(vii) Some dogs are happier than any person.  [A p.194]
(viii) People who own dogs are happier than those who don’t.  [A p.194]
(ix) The bigger the dog, the happier it is.  [A p.194]
(x) There is a beagle that is bigger than every chihuahua and smaller than every person.  [A p.194]
3. (i) Alice is a timid dog, and some cats are bigger than her. [A p.195]
(ii) Every dog that is bigger than Alice is bigger than Bill. [A p.195]
(iii) Bill is a timid cat, and every dog is bigger than him. [A p.195]
(iv) Every timid dog growls at some gray cat. [A p.195]
(v) Every dog growls at every timid cat. [A p.195]
(vi) Some timid dog growls at every gray cat. [A p.195]
(vii) No timid dog growls at any gray cat. [A p.195]
(viii) Alice wants to buy something from Woolworths, but Bill doesn’t. [A p.195]
(ix) Alice wants to buy something from Woolworths that Bill doesn’t. [A p.195]
(x) Bill growls at anything that Alice wants to buy from Woolworths. [A p.195]

4. (i) Dave admires everyone. [A p.196]
(ii) No one admires Dave. [A p.196]
(iii) Dave doesn’t admire himself. [A p.196]
(iv) No one admires himself. 6 [A p.196]
(v) Dave admires anyone who doesn’t admire himself. 7 [A p.196]
(vi) Every self-admiring person admires Dave. [A p.196]
(vii) Frank admires Elvis but he prefers the Rolling Stones. [A p.196]
(viii) Frank prefers any song recorded by the Rolling Stones to any song recorded by Elvis. [A p.196]
(ix) The Rolling Stones recorded a top-twenty song, but Elvis didn’t. [A p.196]
(x) Elvis prefers any top-twenty song that the Rolling Stones recorded to any song that he himself recorded. [A p.196]

6 Read “himself” here as gender-neutral—that is, the claim is that no one self-admires.
7 Read “himself” here as gender-neutral—that is, the claim is that Dave admires anyone who doesn’t self-admire.
Exercises 12.2.2

1. Here is a model:
   Domain: \{1, 2, 3, \ldots\}
   Referents: a: 1, b: 2, c: 3
   Extensions: E: \{2, 4, 6, \ldots\}
   P: \{2, 3, 5, 7, 11, \ldots\}\(^8\)
   L: \{(1, 2), (1, 3), (1, 4), \ldots, (2, 3), (2, 4), \ldots, (3, 4), \ldots\}\(^9\)

State whether each of the following propositions is true or false in this model.

(i) \(Lba\) [A p.196]
(ii) \(Lab \lor Lba\) [A p.196]
(iii) \(Laa\) [A p.196]
(iv) \(\exists x Lxb\) [A p.196]
(v) \(\exists x Lxa\) [A p.196]
(vi) \(\exists x Lxx\) [A p.197]
(vii) \(\forall x \exists y Lxy\) [A p.197]
(viii) \(\forall x \exists y Lyx\) [A p.197]
(ix) \(\exists x (Px \land Lxb)\) [A p.197]
(x) \(\exists x (Px \land Lcx)\) [A p.197]
(xi) \(\forall x \exists y (Ey \land Lxy)\) [A p.197]
(xii) \(\forall x \exists y (Py \land Lxy)\) [A p.197]
(xiii) \(\forall x (Lcx \rightarrow Ex)\) [A p.197]
(xiv) \(\forall x ((Lax \land Lxc) \rightarrow Ex)\) [A p.197]
(xv) \(\forall x \forall y (Lxy \lor Lyx)\) [A p.197]
(xvi) \(\exists x \exists y \exists z (Ex \land Py \land Ez \land Pz \land Lxy \land Lyz)\) [A p.197]
(xvii) \(\exists x \exists y \exists z (Lxy \land Lyz \land Lxz)\) [A p.197]
(xviii) \(\forall x \forall y \forall z ((Lxy \land Lyz) \rightarrow Lxz)\) [A p.197]

\(^8\)That is, the set of prime numbers.
\(^9\)That is, the set of all pairs \(\langle x, y \rangle\) such that \(x\) is less than \(y\). A more compact way of writing this set is \(\{\langle x, y \rangle : x < y\}\). See §16.1 for an explanation of this kind of notation for sets.
2. Here is a model:

Domain: \{1, 2, 3\}

Referents: \ a: 1 \ b: 2 \ c: 3

Extensions: 
- \( F \): \{1, 2\}
- \( G \): \{2, 3\}
- \( R \): \{(1, 2), (2, 1), (2, 3)\}
- \( S \): \{(1, 2, 3)\}

State whether each of the following propositions is true or false in this model.

(i) \( \forall x \forall y (Rxy \rightarrow Ryx) \) [A p.197]
(ii) \( \forall x \forall y (Ryx \rightarrow Rxy) \) [A p.197]
(iii) \( \forall x \exists y (Gy \land Rxy) \) [A p.197]
(iv) \( \forall x (Fx \rightarrow \exists y (Gy \land Rxy)) \) [A p.197]
(v) \( \exists x \exists y \exists z Sxyz \) [A p.197]
(vi) \( \exists x \exists y Sxay \) [A p.197]
(vii) \( \exists x \exists y Sxby \) [A p.197]
(viii) \( \exists x Sxxx \) [A p.197]
(ix) \( \exists x \exists y (Fx \land Gy \land Sxby) \) [A p.197]
(x) \( \exists x \exists y (Fx \land Gy \land Sxby) \) [A p.197]

3. Here is a model:

Domain: \{Alice, Bob, Carol, Dave, Edwina, Frank\}

Referents: \ a: Alice \ b: Bob \ c: Carol \ d: Dave \ e: Edwina \ f: Frank

Extensions: 
- \( M \): \{Bob, Dave, Frank\}
- \( F \): \{Alice, Carol, Edwina\}
- \( L \): \{(Alice, Carol), (Alice, Dave), (Alice, Alice), (Dave, Carol), (Edwina, Dave), (Frank, Bob)\}
- \( S \): \{(Alice, Bob), (Alice, Dave), (Bob, Alice), (Bob, Dave)\}

State whether each of the following propositions is true or false in this model.

(i) \( \forall x \forall y (Lxy \rightarrow Lyx) \) [A p.197]
(ii) \( \exists x Lxx \) [A p.198]
(iii) \( \neg \exists x Sxx \) [A p.198]
(iv) $\forall x \forall y (Sxy \rightarrow Syx)$  
(v) $\forall x \forall y \forall z ((Sxy \land Syz) \rightarrow Sxz)$  
(vi) $\forall x (Mx \rightarrow \exists y Lyx)$  
(vii) $\forall x (Fx \rightarrow \exists y Lyx)$  
(viii) $\forall x (Fx \rightarrow \exists y Lxy)$  
(ix) $\exists x \exists y (Lax \land Lyb)$  
(x) $\forall x ((Lxd \lor Ldx) \lor Mx)$

[A p.198]

4. For each of the following propositions, describe (a) a model in which it is true and (b) a model in which it is false. If there is no model of one of these types, explain why.

(i) $\forall (Rxx \rightarrow \exists y Rxy)$  
(ii) $\forall x (\exists y Rxy \rightarrow \exists z Rzx)$  
(iii) $\forall x Rax \rightarrow \forall x \exists y Ryx$  
(iv) $\forall x \exists y \exists z Rxyz \rightarrow \exists x \exists y Rxy$  
(v) $\forall x \forall y (Fxy \rightarrow Fyx)$  
(vi) $\forall x \forall y (Fxy \leftrightarrow Fyx)$  
(vii) $\forall x \forall y Fxy$  
(viii) $\exists x \exists y Fxy \land \neg Faa$  
(ix) $\forall x \forall y Fxy \land \neg Faa$  
(x) $\forall x \forall y (Fxy \leftrightarrow Fyx) \land Fab \land \neg Fba$

[A p.198]

Exercises 12.3.1

1. Using trees, determine whether the following propositions are logical truths. For any proposition that is not a logical truth, read off from your tree a model in which it is false.

(i) $\forall x (Rxx \rightarrow \exists y Rxy)$  
(ii) $\forall x (\exists y Rxy \rightarrow \exists z Rzx)$  
(iii) $\forall x Rax \rightarrow \forall x \exists y Ryx$  
(iv) $\forall x \exists y \exists z Rxyz \rightarrow \exists x \exists y Rxy$

[A p.200]

54
2. Using trees, determine whether the following arguments are valid. For any argument that is not valid, read off from your tree a model in which the premises are true and the conclusion false.

(i) \( \forall x \forall y \forall z ((Rxy \land Ryz) \rightarrow Rxz) \)
\( \quad \begin{align*}
&\quad \begin{array}{c}
Rab \\
Rba
\end{array} \\
\therefore \quad &\exists xRxx \\
\end{align*} \)

(ii) \( \forall x Fxa \rightarrow \exists x Fax \)
\( \quad \begin{align*}
&\quad \begin{array}{c}
\exists x Fxa \\
\therefore \quad &\exists x Fax
\end{array}
\end{align*} \)

(iii) \( \exists y \exists z(Rxy \land Rzy) \)
\( \therefore \quad \exists xRxx \)

(iv) \( \forall x \forall y (Rxy \rightarrow Ryx) \)
\( \quad \begin{align*}
&\quad \begin{array}{c}
\exists xRxa \\
\therefore \quad &\exists xRax
\end{array}
\end{align*} \)

(v) \( \forall x \forall y (\neg Rxy \rightarrow Ryx) \)
\( \therefore \quad \forall x \exists y Ryx \)

(vi) \( \forall x \forall y (Rxy \rightarrow (Fx \land Gy)) \)
\( \therefore \quad \neg \exists xRxz \)

(vii) \( \forall x (Fx \rightarrow (\forall y Rxy \lor \neg \exists y Rxy)) \)
\( \quad \begin{align*}
&\quad \begin{array}{c}
Fa \\
\neg Rab \\
\therefore \quad &\neg Raa
\end{array}
\end{align*} \)

(viii) \( \forall x \forall y (\exists z (Rzx \land Rzy) \rightarrow Rxy) \)
\( \quad \begin{align*}
&\quad \begin{array}{c}
\forall xRax \\
\therefore \quad &\forall x \forall y Rxy
\end{array}
\end{align*} \)

(ix) \( \forall x \exists y Rxy \)
\( \therefore \quad \exists xRxb \)
(x) \[ \exists x \forall y (Fy \rightarrow Rxy) \]
\[ \exists x \forall y \neg Ryx \]
\[ \therefore \exists x \neg Fx \]

[ A p.208 ]

3. Translate the following arguments into GPL and then test for validity using trees. For any argument that is not valid, read off from your tree a model in which the premises are true and the conclusion false.

(i) Alice is older than Bill, and Bill is older than Carol, so Alice must be older than Carol.  
[A p.209]

(ii) Alice is older than Bill. Bill is older than Carol. Anything older than something is older than everything that that something is older than. It follows that Alice is older than Carol.  
[A p.209]

(iii) I trust everything you trust. You trust all bankers. Dave is a banker. Thus, I trust Dave.  

(iv) Everybody loves somebody, so everybody is loved by somebody.  
[A p.211]

(v) Nancy is a restaurateur. She can afford to feed all and only those restaurateurs who can’t afford to feed themselves. So Nancy is very wealthy.  
[A p.212]

(vi) Everything in Paris is more beautiful than anything in Canberra. The Eiffel tower is in Paris, and Lake Burley Griffin is in Canberra. Therefore, the Eiffel tower is more beautiful than Lake Burley Griffin.  
[A p.213]

(vii) Politicians only talk to politicians. No journalist is a politician. So no politician talks to any journalist.  
[A p.214]

(viii) There is no object that is smaller than all objects; therefore, there is no object such that every object is smaller than it.  
[A p.215]

(ix) Either a movie isn’t commercially successful or both Margaret and David like it. There aren’t any French movies that Margaret and David both like. So there aren’t any commercially successful French movies.  
[A p.216]

(x) There’s something that causes everything. Thus, there’s nothing that is caused by everything.  
[A p.217]
Exercises 12.4.1

For each of the following arguments, first translate into GPL and show that the argument is invalid using a tree. Then formulate suitable postulates and show, using a tree, that the argument with these postulates added as extra premises is valid.

1. Roger will eat any food; therefore, Roger will eat that egg. [A p.217]
3. John ran 5 miles; Nancy ran 10 miles; hence, Nancy ran farther than John. [A p.218]
5. Chris enjoys novels and nothing else; therefore, he does not enjoy anything by Borges. [A p.219]

Exercises 12.5.4

For each of the following wffs, find an equivalent wff in prenex normal form.

1. \((\forall x P x \lor \forall x Q x)\) [A p.220]
2. \((\exists x P x \lor \exists x Q x)\) [A p.220]
3. \((\forall x P x \rightarrow \forall x P x)\) [A p.220]
4. \((\forall x P x \leftrightarrow \forall x P x)\) [A p.220]
5. \(\neg \forall x (S x \land (\exists y T y \rightarrow \exists z U x z))\) [A p.220]
Chapter 13

Identity

Exercises 13.2.2

Translate the following into GPLI.

1. Chris is larger than everything (except himself).  [A p.221]
2. All dogs are beagles—except Chris, who is a chihuahua.  [A p.221]
3. Ben is happy if he has any dog other than Chris by his side.  [A p.221]
4. Chris is happy if he is by anyone’s side but Jonathan’s.  [A p.221]
5. Jonathan is larger than any dog.  [A p.222]
6. Everything that Mary wants is owned by someone else.  [A p.222]
7. Mary owns something that someone else wants.  [A p.222]
8. Mary owns something she doesn’t want.  [A p.222]
9. If Mary owns a beagle, then no one else does.  [A p.222]
10. No one other than Mary owns anything that Mary wants.  [A p.222]
12. *Seinfeld* is Adam’s most preferred television show.  [A p.222]
13. *Family Guy* is Adam’s least preferred television show.  [A p.222]
15. Jonathon is the only person who watches *Family Guy*. [A p.222]
16. Diane is the tallest woman. [A p.222]
17. Edward is the only man who is taller than Diane. [A p.222]
18. Diane isn’t the only woman Edward is taller than. [A p.222]
19. No one whom Diane’s taller than is taller than Edward. [A p.222]
20. Edward and Diane aren’t the only people. [A p.222]
21. You’re the only one who knows Ben. [A p.222]
22. I know people other than Ben. [A p.222]
23. Everyone Ben knows (not including Chris and me) is happy. [A p.222]
24. The only happy person I know is Ben. [A p.222]
25. Ben is the tallest happy person I know. [A p.222]
27. There’s a colder town than Canberra between Sydney and Melbourne. [A p.222]
28. For every town except Jindabyne, there is a colder town. [A p.222]
29. No town between Sydney and Melbourne is larger than Canberra or colder than Jindabyne. [A p.222]
30. Jindabyne is my most preferred town between Sydney and Melbourne. [A p.223]
Exercises 13.3.1

1. Here is a model:
   Domain: {Clark, Bruce, Peter}
   Referents: a: Clark  b: Clark  e: Peter  f: Peter
   Extensions: F: {Bruce, Peter}
               R: {⟨Clark, Bruce⟩, ⟨Clark, Peter⟩, ⟨Bruce, Bruce⟩, ⟨Peter, Peter⟩}

   State whether each of the following propositions is true or false in this model.
   
   (i) \( \forall x (~Fx \rightarrow x = a) \)  
       [A p.223]
   (ii) \( \forall x (x = a \rightarrow \forall y Rxy) \)  
        [A p.223]
   (iii) \( \exists x (x \neq f \land Ff \land Rx f) \)  
        [A p.223]
   (iv) \( \forall x (x \neq b \rightarrow Rax) \)  
        [A p.223]
   (v) \( \exists x (x \neq a \land \forall y (Fy \rightarrow Rxy)) \)  
        [A p.223]
   (vi) \( \exists x (x \neq e \land Rxx) \)  
        [A p.223]

2. Here is a model:
   Domain: {1, 2, 3, . . .}
   Referents: a: 1  b: 1  c: 2  e: 4
   Extensions: F: {1, 2, 3}
               G: {1, 3, 5, . . .}
               R: {⟨1, 2⟩, ⟨2, 3⟩, ⟨3, 4⟩, ⟨4, 5⟩, . . .}

   State whether each of the following propositions is true or false in this model.
   
   (i) \( \exists x (Rax \land \neg Rbx) \)  
       [A p.223]
   (ii) \( \forall x ((Fx \land \neg Gx) \rightarrow x = c) \)  
        [A p.223]
   (iii) \( \forall x (x \neq a \rightarrow \exists y Ryx) \)  
        [A p.223]
   (iv) \( \forall x (Gx \rightarrow \exists y \exists z (Rxy \land Ryz \land Gz)) \)  
        [A p.223]
   (v) \( \forall x ((x = a \lor x = b) \rightarrow x \neq c) \)  
       [A p.223]
   (vi) \( \exists x (~Fx \land x \neq e \land \exists y (Fy \land Ryx)) \)  
       [A p.223]

3. For each of the following propositions, describe (a) a model in which it is true and (b) a model in which it is false. If there is no model of one of these types, explain why.
Exercises 13.4.3

1. Using trees, determine whether the following sets of propositions are satisfiable. For any set that is satisfiable, read off from your tree a model in which all propositions in the set are true.

   (i) $\forall x (Fx \rightarrow x = a)$ [A p.223]
   (ii) $\exists x (x = a \land x = b)$ [A p.223]
   (iii) $\exists x \forall y (x \neq y \rightarrow Rxy)$ [A p.223]
   (iv) $\forall x \forall y (Rxy \rightarrow x = y)$ [A p.224]
   (v) $\forall x \forall y (x \neq y \rightarrow \exists z Rxyz)$ [A p.224]
   (vi) $\exists x (x = a \land a \neq x)$ [A p.224]
   (vii) $\forall x \forall y ((Fx \land Fy) \rightarrow x = y)$ [A p.224]
   (viii) $\exists x (Fx \land \forall y (Gy \rightarrow x = y))$ [A p.224]
   (ix) $\forall x (Fx \rightarrow \exists y (x \neq y \land Rxy))$ [A p.224]
   (x) $\forall x ((Fx \land Ra) \rightarrow x \neq a)$ [A p.224]
   (xi) $\exists x \exists y \exists z (x \neq y \land y \neq z \land z \neq Rxyz)$ [A p.224]
   (xii) $\forall x \forall y \forall z (Rx y z \rightarrow (x \neq y \land y \neq z \land z \neq x))$ [A p.224]
   (xiii) $\forall x \forall y (x \neq y \rightarrow (Fx \lor Fy))$ [A p.225]
   (xiv) $\exists x (Fx \land \forall y ((Fy \land Fx) \rightarrow Rxy))$ [A p.225]
   (xv) $\forall x \forall y \forall z (Rx y z \rightarrow (Rx x \land Ry y \land Rzz))$ [A p.225]
   (xvi) $\forall x (Rxx \rightarrow \forall y (x = y \rightarrow Rxy))$ [A p.225]
   (xvii) $(Fa \land Fb) \land \forall x \forall y ((Fx \land Fy) \rightarrow x = y)$ [A p.225]
   (xviii) $\exists x \exists y (Fx \land Fy \land \forall z (Fz \rightarrow (x = z \lor y = z)))$ [A p.225]
2. Using trees, determine whether the following arguments are valid. For any argument that is not valid, read off from your tree a model in which the premises are true and the conclusion false.

(i) \( \exists x Fx \)
\( \exists y Gy \)
\( \forall x \forall y xy = y \)
\( \therefore \exists x(Fx \land Gx) \)  

(ii) \( \exists x \exists y(Fx \land Gy \land \forall z (z = x \lor z = y)) \)
\( \therefore \exists x(Fx \land Gx) \)  

(iii) \( Rab \)
\( \therefore \forall x \forall y \forall z((Rx y \land Ryz) \land x = z) \rightarrow Ryy \)  

(iv) \( \forall x \forall y(Rxy \rightarrow Ryx) \)
\( \exists x(Rax \land x \neq b) \)
\( \therefore \exists x(Rxa \land x \neq b) \)  

(v) \( \forall x \forall y xy = y \)
\( \therefore \forall x \forall y(Rxy \rightarrow Ryx) \)  

(vi) \( \forall x \forall y \forall z((Rxy \land Rxz) \rightarrow y = z) \)
\( Rab \land Rcd \)
\( b \neq d \)
\( \therefore a \neq c \)  

(vii) \( \exists x \exists y(Rxy \land x = y) \)
\( \therefore \neg \forall x Rxx \)  

(viii) \( \forall x(x = a \lor x = b) \)
\( \therefore \forall xx = a \)  

(ix) \( \forall xRax \)
\( \neg \forall x \forall y xy = y \)
\( \therefore \exists x \exists y \exists z(Rxy \land Rxz \land y \neq z) \)  

(x) \( \forall xx = a \)
\( \therefore \forall xx = b \)
3. Translate the following propositions into GPLI and then test whether they are logical truths using trees. For any proposition that is not a logical truth, read off from your tree a model in which it is false.

(i) If Stan is the only firefighter, then nothing else is a firefighter. [A p.237]
(ii) If Julius Caesar is left-handed but Lewis Carroll isn’t, then Lewis Carroll isn’t Julius Caesar. [A p.237]
(iii) If the sun is warming all and only things other than itself, then the sun is warming Apollo. [A p.238]
(iv) If Kevin Bacon isn’t Kevin Bacon, then he’s Michael J. Fox. [A p.238]
(v) If no one who isn’t Twain is a witty author, and Clemens is an author, then Clemens is not witty. [A p.239]
(vi) No spy trusts any other spy. [A p.240]
(vii) Either everything is identical to this ant, or nothing is. [A p.240]
(viii) If Doug is afraid of everything but Santa Claus, then either he’s afraid of himself, or else he’s Santa Claus. [A p.241]
(ix) If Mark respects Samuel and only Samuel, then Mark doesn’t respect himself. [A p.242]
(x) Either I am a physical body, or I am identical to something that’s not a physical body. [A p.243]

Exercises 13.5.1

1. Translate the following propositions into GPLI and then test whether they are logical truths using trees. For any proposition that is not a logical truth, read off from your tree a model in which it is false.

(i) There are at most two gremlins. [A p.244]
(ii) There are at least three Beatles. [A p.245]
(iii) There is exactly one thing that is identical to Kevin Bacon. [A p.246]
(iv) If there are at least two oceans, then there is an ocean. [A p.247]
(v) Take any two distinct dogs, the first of which is larger than the second; then the second is not larger than the first.  

(vi) If there is exactly one apple, then there is at least one apple.

(vii) It’s not the case both that there are at least two apples and that there is at most one apple.

(viii) Either there are no snakes, or there are at least two snakes.

2. Translate the following arguments into GPLI and then test for validity using trees. For any argument that is not valid, read off from your tree a model in which the premises are true and the conclusion false.

(i) There are at least three things in the room. It follows that there are at least two things in the room.

(ii) There are at least two bears in Canada, so there are at most two bears in Canada.

(iii) There is at most one barber. So either every barber cuts his own hair, or no barber cuts any barber’s hair.

(iv) There are at most two things. If you pick a first thing and then pick a second thing (which may or may not be a different object from the first thing), then one of them is heavier than the other. So everything is either the heaviest or the lightest thing.

(v) Some football players are athletes. Some golfers are athletes. Thus, there are at least two athletes.

(vi) Everything is a part of itself. So everything has at least two parts.

(vii) There are at least two things that are identical to the Eiffel tower. Therefore, there is no Eiffel tower.

(viii) I’m afraid of Jemima and the chief of police. So either Jemima is the chief of police, or I’m afraid of at least two things.
Exercises 13.6.1.1

Translate the following into GPLI, using Russell’s approach to definite descriptions.

5. Joseph Conrad authored *The Inheritors*, but it’s not the case that he is the author of *The Inheritors*. [A p.258]
6. The author of *The Shadow Line* is taller than any author of *Lord Jim*. [A p.258]
7. There is something taller than the author of *The Shadow Line*. [A p.258]
8. The author of *The Shadow Line* is taller than Joseph Conrad, who is taller than the author of *Lord Jim*. [A p.258]

Exercises 13.6.2.1

Translate the claims in Exercises 13.6.1.1 into GPLID, using the definite description operator to translate definite descriptions. [A p.259]
Exercises 13.6.3.1

Translate the claims in Exercises 13.6.1.1 into GPLI, treating definite descriptions as names and stating appropriate uniqueness assumptions as postulates. [A p.260]

Exercises 13.7.4

1. Translate the following into GPLIF.

   (i) \( 2 + 2 = 4 \) [A p.261]
   (ii) \( 2 \times 2 = 4 \) [A p.261]
   (iii) \( 2 + 2 = 2 \times 2 \) [A p.261]
   (iv) \( 2^2 = 2 \times 2 \) [A p.261]
   (v) \((x + y)^2 = (x + y)(x + y)\) [A p.261]
   (vi) \((x + y)^2 = x^2 + 2xy + y^2\) [A p.262]
   (vii) Whether \( x \) is even or odd, \( 2x \) is even. [A p.262]
   (viii) Tripling an odd number results in an odd number; tripling an even number results in an even number. [A p.262]
   (ix) \( 5x < 6x \) [A p.262]
   (x) If \( x < y \), then \( 3x < 4y \) [A p.262]
2. Here is a model:

Domain: \{Alison, Bruce, Calvin, Delilah\}

Referents: 
- \(a\): Alison
- \(b\): Bruce
- \(c\): Calvin
- \(d\): Delilah

Extensions:
- \(F\): \{Alison, Delilah\}
- \(M\): \{Bruce, Calvin\}
- \(S\): \{⟨Alison, Bruce⟩, ⟨Alison, Calvin⟩, ⟨Alison, Delilah⟩, ⟨Bruce, Calvin⟩, ⟨Bruce, Delilah⟩, ⟨Calvin, Delilah⟩\}

Values of function symbols:
- \(f\): \{⟨Alison, Bruce⟩, ⟨Calvin, Bruce⟩, ⟨Delilah, Calvin⟩\}
- \(m\): \{⟨Alison, Delilah⟩, ⟨Bruce, Alison⟩, ⟨Calvin, Delilah⟩, ⟨Delilah, Alison⟩\}
- \(s\): \{⟨Alison, Alison, Bruce⟩, ⟨Alison, Bruce, Calvin⟩, ⟨Alison, Calvin, Delilah⟩, ⟨Alison, Delilah, Alison⟩, ⟨Bruce, Alison, Calvin⟩, ⟨Bruce, Bruce, Calvin⟩, ⟨Bruce, Delilah, Alison⟩, ⟨Calvin, Alison, Delilah⟩, ⟨Calvin, Bruce, Delilah⟩, ⟨Calvin, Calvin, Delilah⟩, ⟨Calvin, Delilah, Alison⟩, ⟨Delilah, Alison, Alison⟩, ⟨Delilah, Bruce, Alison⟩, ⟨Delilah, Calvin, Alison⟩, ⟨Delilah, Delilah, Alison⟩\}

State whether each of the following propositions is true or false in this model.

(i) \(\forall x M f(x)\) [A p.262]
(ii) \(\exists x M m(x)\) [A p.262]
(iii) \(s(c, b) = d\) [A p.262]
(iv) \(s(a, a) = f(c)\) [A p.262]
(v) \(F f(b) \rightarrow M f(b)\) [A p.262]
(vi) \(\forall x \forall y \exists z \forall w(s(x, y) = w \leftrightarrow w = z)\) [A p.262]
(vii) \(\exists x \exists y \exists z \exists w(s(x, y) = z \land s(x, y) = w \land z \neq w)\) [A p.262]
3. Here is a model:

Domain: \{1, 2, 3, \ldots\}

Referents: \quad a_1: 1 \quad a_2: 2 \quad a_3: 3 \quad \ldots

Extensions: \quad E: \quad \{2, 4, 6, \ldots\}

O: \quad \{1, 2, 3, \ldots\}

L: \quad \{(x, y) : x < y\} \quad \text{[A p.262]}

Values of

function symbols:

\( q \): \quad \{(x, y) : y = x^2\} \quad \text{[A p.262]}

\( s \): \quad \{(x, y, z) : z = x + y\} \quad \text{[A p.262]}

\( p \): \quad \{(x, y, z) : z = x \times y\} \quad \text{[A p.262]}

State whether each of the following propositions is true or false in this model.

(i) \( s(a_2, a_2) = a_5 \) \quad \text{[A p.262]}

(ii) \( p(a_2, a_2) = a_3 \) \quad \text{[A p.262]}

(iii) \( s(a_2, a_2) = p(a_2, a_2) \) \quad \text{[A p.262]}

(iv) \( q(a_2) = p(a_1, a_2) \) \quad \text{[A p.262]}

(v) \( \forall x \forall y q(s(x, y)) = p(s(x, y), s(x, y)) \) \quad \text{[A p.262]}

(vi) \( \forall x \forall y q(s(x, y)) = s(s(q(x), p(a_2, p(x, y))), q(y)) \) \quad \text{[A p.262]}

(vii) \( \forall x Ep(a_2, x) \) \quad \text{[A p.262]}

(viii) \( \forall x ((Ox \rightarrow Op(a_3, x)) \land (Ex \rightarrow Ep(a_3, x))) \) \quad \text{[A p.262]}

(ix) \( \exists x Lp(a_5, x) \) \quad \text{[A p.262]}

(x) \( \forall x \forall y (Lyx \rightarrow Lp(a_3, x) \land p(a_4, y)) \) \quad \text{[A p.262]}

---

10That is, \{\langle 1, 2 \rangle, \langle 1, 3 \rangle, \langle 2, 3 \rangle, \langle 1, 4 \rangle, \langle 2, 4 \rangle, \langle 3, 4 \rangle, \langle 1, 5 \rangle, \langle 2, 5 \rangle, \langle 3, 5 \rangle, \langle 4, 5 \rangle, \ldots\}.  

11That is, \{\langle 1, 1 \rangle, \langle 2, 4 \rangle, \langle 3, 9 \rangle, \langle 4, 16 \rangle, \ldots\}.  

12That is, \{\langle 1, 1, 2 \rangle, \langle 2, 1, 3 \rangle, \langle 2, 2, 4 \rangle, \langle 1, 2, 3 \rangle, \langle 3, 1, 4 \rangle, \langle 3, 2, 5 \rangle, \langle 3, 3, 6 \rangle, \langle 2, 3, 5 \rangle, \langle 1, 3, 4 \rangle, \langle 4, 1, 5 \rangle, \ldots\}.  

13That is, \{\langle 1, 1, 1 \rangle, \langle 2, 1, 2 \rangle, \langle 2, 2, 4 \rangle, \langle 1, 2, 2 \rangle, \langle 3, 1, 3 \rangle, \langle 3, 2, 6 \rangle, \langle 3, 3, 9 \rangle, \langle 2, 3, 6 \rangle, \langle 1, 3, 3 \rangle, \langle 4, 1, 4 \rangle, \ldots\}.  

4. For each of the following propositions, describe (a) a model in which it is true and (b) a model in which it is false. If there is no model of one of these types, explain why.

(i) \( f(a) = f(b) \)  

(ii) \( f(a) \neq f(b) \)  

(iii) \( f(a) \neq f(a) \)  

(iv) \( \forall x \exists y f(x) = y \)  

(v) \( \exists x \forall y f(x) = y \)  

(vi) \( \forall x \forall y s(x, y) = s(y, x) \)  

(vii) \( \forall x \forall y f(s(x, y)) = s(f(x), f(y)) \)  

(viii) \( \exists x \exists y s(x, y) = f(x) \rightarrow \exists x \exists y s(x, y) = f(y) \)  

(ix) \( \exists x \exists y s(x, y) = f(x) \rightarrow \exists x \exists y f(s(x, y)) = f(x) \)  

(x) \( \forall x \forall y \exists z \forall w (s(x, y) = w \leftrightarrow w = z) \)

Chapter 14

Metatheory

Exercises 14.1.1.1

What is the complexity of each of the following wffs?

1. $Fa$
   
   [A p.265]

2. $(Hx \rightarrow \forall x(Fx \rightarrow Gx))$
   
   [A p.265]

3. $\forall xx = x$
   
   [A p.265]

4. $\forall x\exists y\neg Rxy$
   
   [A p.265]

5. $\neg\forall xa \neq x$
   
   [A p.265]

6. $\forall x(Fx \rightarrow \exists yRxy)$
   
   [A p.265]

7. $(\forall xa = x \land \neg \exists xa \neq x)$
   
   [A p.265]

8. $(Fa \land (Fa \land (Fa \land (Fa \land (Fa \land Fa)))))$
   
   [A p.265]

9. $\forall x(Fx \rightarrow \forall x(Fx \rightarrow \forall x(Fx \rightarrow \forall x(Fx \rightarrow \forall x(Fx \rightarrow Fx))))))$
   
   [A p.265]

10. $((\neg \exists x(\neg Fx \lor Gx) \land a \neq b) \rightarrow \neg Fa) \lor (\neg \exists x(\neg Fx \lor Gx) \lor \neg Fa))$
    
    [A p.265]
Exercises 14.1.2.1

In §10.1 we showed that the tree rules for (negated and unnegated) disjunction and the quantifiers are truth-preserving (in the precise sense spelled out in §14.1.2), and in §13.4 we showed that the tree rule SI is truth-preserving. Complete the soundness proof by showing that the remaining tree rules are truth-preserving:

5. Unnegated biconditional. [A p.266]

Exercises 14.1.3.1

Fill in the remaining cases in step (III) of the completeness proof.

1. \( \gamma \) is of the form \( \neg \alpha \), and \( \alpha \)'s main operator is conjunction. [A p.267]
2. \( \gamma \) is of the form \( \neg \alpha \), and \( \alpha \)'s main operator is the conditional. [A p.267]
3. \( \gamma \) is of the form \( \neg \alpha \), and \( \alpha \)'s main operator is the biconditional. [A p.268]
4. \( \gamma \) is of the form \( \neg \alpha \), and \( \alpha \)'s main operator is the existential quantifier. [A p.268]
5. \( \gamma \)'s main operator is the biconditional. [A p.268]
Chapter 15

Other Methods of Proof

Exercises 15.1.5

1. Show the following in $A_1$ by producing formal proofs.

   (i) $\neg P \rightarrow Q, \neg P \vdash Q$ [A p.269]
   (ii) $P \vdash \neg Q \rightarrow P$ [A p.269]
   (iii) $\neg Q \vdash (\neg P \rightarrow Q) \rightarrow P$ [A p.269]
   (iv) $\vdash P \rightarrow P$ [A p.269]
   (v) $\neg (P \rightarrow Q) \vdash Q$ [A p.270]
   (vi) $P, \neg P \vdash Q$ [A p.270]
   (vii) $P \land Q \vdash (P \rightarrow \neg Q) \rightarrow \neg (P \rightarrow \neg Q)$ [A p.270]

2. Show the following in $A_1$ by producing formal or informal proofs.

   (i) $\vdash \neg (P \rightarrow \neg Q) \rightarrow Q$ [A p.270]
   (ii) $\vdash P \rightarrow (P \lor Q)$ [A p.270]
   (iii) $\vdash ((P \rightarrow Q) \rightarrow (P \rightarrow R)) \rightarrow (P \rightarrow (Q \rightarrow R))$ [A p.271]
   (iv) $\vdash (P \rightarrow Q) \rightarrow (\neg Q \rightarrow \neg P)$ [A p.271]
   (v) $P \rightarrow Q, P \rightarrow \neg Q \vdash \neg P$ [A p.271]
   (vi) $P \rightarrow Q, \neg Q \rightarrow P \vdash Q$ [A p.272]
   (vii) $\vdash (P \rightarrow (Q \rightarrow R)) \rightarrow (Q \rightarrow (P \rightarrow R))$ [A p.272]

3. Show the following in $A_2$ by producing formal or informal proofs.

   (i) $\vdash P \rightarrow \neg \neg P$ [A p.272]
(ii) \( P \rightarrow \neg P \vdash \neg P \) [A p.273]

(iii) \( P \rightarrow Q \vdash \neg Q \rightarrow \neg P \) [A p.273]

(iv) \( \vdash \neg Q \rightarrow (Q \rightarrow P) \) [A p.273]

(v) \( P \land Q \vdash P \rightarrow Q \) [A p.273]

(vi) \( \neg Q \vdash (P \lor Q) \rightarrow P \) [A p.274]

(vii) \( \neg P \land \neg Q \vdash \neg(P \lor Q) \) [A p.274]

(viii) \( \neg(P \lor Q) \vdash \neg P \land \neg Q \) [A p.275]

(ix) \( \vdash \neg(P \land \neg P) \) [A p.275]

(x) \( \vdash (P \land \neg P) \rightarrow \neg Q \) [A p.276]

(xi) \( \vdash P \leftrightarrow P \) [A p.276]

(xii) \( \vdash P \rightarrow (\neg P \rightarrow Q) \) [A p.277]

4. Show the following in \( A_1^{\forall\exists} \) by producing formal or informal proofs.

(i) \( \forall x(Fx \rightarrow Gx), Fa \vdash Ga \) [A p.277]

(ii) \( \forall xFx \vdash \forall x(Gx \lor Fx) \) [A p.277]

(iii) \( \forall x\forall y(Rxy \rightarrow Ryx), Rab \vdash Rba \) [A p.277]

(iv) \( \exists xFx \rightarrow \neg Ga \vdash Ga \rightarrow \forall x\neg Fx \) [A p.278]

(v) \( \vdash Fa \rightarrow \exists xFx \) [A p.279]

(vi) \( Fa, a = b \vdash Fb \) [A p.280]

(vii) \( \forall x\forall yx = y \vdash a = b \) [A p.280]

(viii) \( a = b, a = c \vdash c = b \) [A p.280]

(ix) \( \vdash a = b \rightarrow b = a \) [A p.281]

(x) \( Fa, \neg Fb \vdash \neg a = b \) [A p.281]

(xi) \( \neg b = a, \forall x(\neg Fx \rightarrow x = a) \vdash Fb \) [A p.283]

(xii) \( \vdash \forall xFx \rightarrow \forall yFy \) [A p.283]

5. Explain why the original unrestricted deduction theorem does not hold in \( A_1^{\forall\exists} \) and why the restricted version stated at the end of §15.1.1.1 does hold. [A p.283]
Exercises 15.2.3

1. Show the following in $N_1$.

(i) $\vdash (\neg P \rightarrow P) \rightarrow P$ [A p.284]
(ii) $A \rightarrow C$, $B \rightarrow C$, $A \lor B \vdash C$ [A p.284]
(iii) $\vdash \neg \neg P \rightarrow P$ [A p.284]
(iv) $\neg (A \lor B) \vdash \neg A \land \neg B$ [A p.285]
(v) $A, \neg A \vdash B$ [A p.285]
(vi) $A \rightarrow B$, $B \rightarrow C \vdash A \rightarrow C$ [A p.285]
(vii) $P \rightarrow Q \vdash \neg Q \rightarrow \neg P$ [A p.286]
(viii) $A \lor B, \neg A \vdash B$ [A p.286]
(ix) $P \rightarrow R$, $Q \rightarrow R$, $P \lor Q \vdash R$ [A p.287]
(x) $P \rightarrow Q \vdash \neg (P \land \neg Q)$ [A p.287]

2. Establish each of the following in each of the systems $N_2$ through $N_5$.

(i) $\vdash A \lor \neg A$ [A p.288]
(ii) $A \land \neg A \vdash B$ [A p.289]
(iii) $\vdash \neg \neg A \rightarrow A$ [A p.289]
(iv) $\vdash \neg (A \land \neg A)$ [A p.291]

3. Show the following in $N_1^{\forall \exists}$.

(i) $\vdash \forall x(Fx \rightarrow Fx)$ [A p.291]
(ii) $\exists x(Fx \land Gx) \vdash \exists xFx \land \exists xGx$ [A p.291]
(iii) $\forall x(Fx \rightarrow Gx), \neg \exists xGx \vdash \neg \exists xFx$ [A p.292]
(iv) $\forall x(Fx \rightarrow x = a) \vdash Fb \rightarrow a = b$ [A p.292]
(v) $\forall x \forall yx = y, Raa \vdash \forall x \forall yRxy$ [A p.293]
(vi) $\vdash \forall xRxx \rightarrow \forall x \exists yRxy$ [A p.293]
(vii) $\vdash \exists xFx \rightarrow \forall x \neg Fx$ [A p.294]
(viii) $\neg \exists xFx \vdash \forall x \neg Fx$ [A p.294]
(ix) $\forall xx = a \vdash b = c$ [A p.294]
(x) $\vdash \forall x \forall y((Fx \land \neg Fy) \rightarrow \neg x = y)$ [A p.295]
4. (i) Reformulate the rules of system $N_1$ in list style. Re-present your answers to Question 1 above as proofs in the list style. [A p.295]

(ii) Reformulate the rules of system $N_1$ in stack style. Re-present your answers to Question 1 above as proofs in the stack style. [A p.299]

5. State natural deduction rules (i.e., introduction and elimination rules) for $\leftrightarrow$. [A p.302]

Exercises 15.3.3

1. Define the following notions in terms of sequents.

   (i) The proposition $\alpha$ is:
       (a) a contradiction [A p.303]
       (b) satisfiable [A p.303]

   (ii) Propositions $\alpha$ and $\beta$ are:
       (a) jointly satisfiable [A p.303]
       (b) equivalent [A p.303]

2. Redo some of Exercise 7.3.1.1 and Exercise 7.3.2.1 using the sequent calculus $S_1$ instead of trees. [A p.303]

3. Redo some of Exercise 10.2.2, Exercise 12.3.1 and Exercise 13.4.3 using the sequent calculus $S_{1\forall\exists}$ instead of trees. [A p.303]

4. State sequent rules (i.e., left and right introduction rules) for $\leftrightarrow$. [A p.303]

5. State a (new) tree rule that is the analogue of Cut. [A p.303]

Propositions and Arguments

Answers 1.2.1

1. Proposition

2. Non-proposition (Exhortation)

3. Non-proposition (Exclamation)

4. Non-proposition (Wish)

5. Proposition (Not a wish: the speaker is making a statement about what she wishes.)

6. Proposition

7. Proposition

8. Proposition

9. Non-proposition (Wish)

10. Non-proposition (Command)

Answers 1.3.1

1. If the stock market crashes, thousands of experienced investors will lose a lot of money.

The stock market won’t crash.

[Q p.3]
2. Diamond is harder than topaz.
   Topaz is harder than quartz.
   Quartz is harder than calcite.
   Calcite is harder than talc.

   ______________________________________________________________________
   Diamond is harder than talc.  [Q p.3]

3. Any friend of yours is a friend of mine.
   You’re friends with everyone on the volleyball team.

   ______________________________________________________________________
   If Sally’s on the volleyball team, she’s a friend of mine.  [Q p.3]

4. When a politician engages in shady business dealings, it ends up on page one of the newspapers
   No South Australian senator has ever appeared on page one of a newspaper.

   ______________________________________________________________________
   No South Australian senator engages in shady business dealings.  [Q p.3]

   [Contents]

**Answers 1.4.1**

1. Valid.  [Q p.3]
2. Invalid.  [Q p.3]
3. Valid.  [Q p.3]
4. Valid.  [Q p.4]

   [Contents]

**Answers 1.5.1**

2. Argument 2.  [Q p.4]
3. Argument 4.  [Q p.4]

   [Contents]
Answers 1.6.1.1

1. (i) Bob is a good student [Q p.4]
   (ii) I have decided not to go to the party. [Q p.4]
   (iii) Mars is the closest planet to the sun. [Q p.4]
   (iv) Alice is late. [Q p.4]
   (v) I like scrambled eggs. [Q p.4]
   (vi) Scrambled eggs are good for you. [Q p.4]

2. True. [Q p.4]

3. False. [Q p.4]

Answers 1.6.2.1

1. The sun is shining. I am happy. [Q p.5]

2. Maisie is my friend. Rosie is my friend. [Q p.5]

3. Sailing is fun. Snowboarding is fun. [Q p.5]

4. We watched the movie. We ate popcorn. [Q p.5]

5. Sue does not want the red bicycle. Sue does not like the blue bicycle. [Q p.5]

6. The road to the campsite is long. The road to the campsite is uneven. [Q p.5]

Answers 1.6.4.1

1. (a) That’s pistachio ice cream. [Q p.5]
   (b) That doesn’t taste the way it should. [Q p.5]

2. (a) That tastes the way it should. [Q p.5]
   (b) That isn’t pistachio ice cream. [Q p.5]
3. (a) That is supposed to taste that way.
   (b) That isn’t pistachio ice cream. [Q p.5]

4. (a) You pressed the red button.
   (b) Your cup contains coffee. [Q p.5]

5. (a) You pressed the green button.
   (b) Your cup does not contain coffee. [Q p.5]

6. (a) Your cup contains hot chocolate.
   (b) You pressed the green button. [Q p.5]

Answers 1.6.6

1. This is a conditional with antecedent ‘It will be sunny and windy tomorrow’ and consequent ‘We shall go sailing or kite flying tomorrow’. The antecedent is a conjunction with conjuncts ‘It will be sunny tomorrow’ and ‘It will be windy tomorrow’. The consequent is a disjunction with disjuncts ‘We shall go sailing tomorrow’ and ‘We shall go kite flying tomorrow’. [Q p.6]

2. This is a conditional with antecedent ‘It will rain or snow tomorrow’ and consequent ‘We shall not go sailing or kite flying tomorrow’. The antecedent is a disjunction with disjuncts ‘It will rain tomorrow’ and ‘It will snow tomorrow’. The consequent is a negation with negand ‘We shall go sailing or kite flying tomorrow’. The negand, as mentioned in answer to the previous question, is a disjunction with disjuncts ‘We shall go sailing tomorrow’ and ‘We shall go kite flying tomorrow’. [Q p.6]

3. This is a disjunction with disjuncts ‘He’ll stay here and we’ll come back and collect him later’ and ‘He’ll come with us and we’ll all come back together’. The first of these disjuncts is a conjunction with conjuncts ‘He’ll stay here’ and ‘We’ll come back and collect him later’; the second of the disjuncts is also a conjunction, with conjuncts ‘He’ll come with us’ and ‘We’ll all come back together’. [Q p.6]

4. This is a conjunction with conjuncts ‘Jane is a talented painter and a wonderful sculptor’ and ‘If she remains interested in art, her work
will one day be of the highest quality.’ The first of these conjuncts is itself a conjunction, with conjuncts ‘Jane is a talented painter’ and ‘Jane is a wonderful sculptor’; the second conjunct is a conditional, with antecedent ‘Jane remains interested in art’ and consequent ‘Jane’s work will one day be of the highest quality’. 

5. This is a negation with negand ‘The unemployment rate will both increase and decrease in the next quarter’. The negand is a conjunction with conjuncts ‘The unemployment rate will increase in the next quarter’ and ‘The unemployment rate will decrease in the next quarter’. 

6. This is a conditional with antecedent ‘You don’t stop swimming during the daytime’ and consequent ‘Your sunburn will get worse and become painful’. The antecedent is a negation with negand ‘You stop swimming during the daytime’; the consequent is a conjunction with conjuncts ‘Your sunburn will get worse’ and ‘Your sunburn will become painful’. 

7. This is a disjunction with disjuncts ‘Steven won’t get the job’ and ‘I’ll leave and all my clients will leave’. The first of these disjuncts is a negation with negand ‘Steven will get the job’; the second disjunct is a conjunction with conjuncts ‘I’ll leave’ and ‘All my clients will leave’. 

8. This is a biconditional with components ‘The Tigers will not lose’ and ‘Both Thompson and Thomson will get injured’. The first is a negation with negand ‘The Tigers will lose’; the second is a conjunction with conjuncts ‘Thompson will get injured’ and ‘Thomson will get injured’. 

9. This is a conjunction with conjuncts ‘Fido will wag his tail if you give him dinner at 6 this evening’ and ‘Fido will bark if you do not give him dinner at 6 this evening’. The first of these conjuncts is a conditional with antecedent ‘You will give Fido dinner at 6 this evening’ and consequent ‘Fido will wag his tail [at 6 this evening]’; the second conjunct is a conditional with antecedent ‘You do not give Fido dinner at 6 this evening’ and consequent ‘Fido will bark [at 6 this evening]’. Finally, the antecedent of this last conditional is a negation with negand ‘You give Fido dinner at 6 this evening’.
10. This is a disjunction with disjuncts ‘It will rain or snow today’ and ‘It will not rain or snow today’. The first of these disjuncts is itself a disjunction, with disjuncts ‘It will rain today’ and ‘It will snow today’. The second of these disjuncts is a negation with negand ‘It will rain or snow today’. The latter, as already mentioned, is a disjunction, with disjuncts ‘It will rain today’ and ‘It will snow today’.

Chapter 2

The Language of Propositional Logic

Answers 2.3.3

1. Aristotle was not a philosopher. [Q p.7]
2. Aristotle was a philosopher and paper burns. [Q p.7]
3. Aristotle was a philosopher and paper doesn’t burn. [Q p.7]
4. Fire is not hot and paper does not burn. [Q p.7]
5. It’s not true both that fire is hot and that paper burns. [Q p.7]

Answers 2.3.5

1. Either Aristotle was a philosopher and paper burns, or fire is hot. [Q p.8]
2. Either Aristotle wasn’t a philosopher, or paper doesn’t burn. [Q p.8]
3. Aristotle was a philosopher or paper burns—but not both. [Q p.8]
4. It’s not the case either that Aristotle was a philosopher or that fire is hot. [Q p.8]
5. Aristotle was a philosopher, and either paper burns or fire is hot.

Answers 2.3.8

1. (i) If snow is white, then the sky is blue.
   [Q p.8]
(ii) Snow is white if and only if both snow is white and roses are not red.
   [Q p.8]
(iii) It’s not the case that if roses are red then snow is not white.
   [Q p.8]
(iv) If roses are red or snow is white, then roses are red and snow is not white.
   [Q p.8]
(v) Either snow is white and snow is white, or roses are red and the sky is not blue.
   [Q p.8]
(vi) Either grass is green, or if snow is white then roses are red.
   [Q p.8]
(vii) Bananas are yellow if and only if they’re yellow; and they’re not if and only if they’re not.
   [Q p.8]
(viii) If, if the sky is blue then snow is white, then if snow isn’t white then the sky isn’t blue.
   [Q p.8]
(ix) If roses are red, snow is white and the sky is blue, then either bananas are yellow or grass is green.
   [Q p.8]
(x) It’s not the case both that roses aren’t red and that either snow isn’t white or grass is green.
   [Q p.9]
2. Glossary:

- $B$: The sky is blue
- $E$: Snow is red
- $J$: Jim is tall
- $M$: Maisy is tall
- $N$: Nora is tall
- $R$: Roses are red
- $W$: Snow is white

(i) $(W \rightarrow B)$  
(ii) $(B \leftrightarrow (W \land \neg R))$  
(iii) $\neg (R \rightarrow \neg W)$  
(iv) $((E \land R) \rightarrow (R \lor \neg E))$

2. (i) (a) 1 is an odd number.
   (b) If $x$ is an odd number then so is $x + 2$.
   (c) Nothing else is an odd number.
   Note: We are assuming here that ‘number’ means ‘positive integer’. If it is taken to mean ‘integer’ (i.e. positive, negative or zero) then the answer is:
   (a) 1 is an odd number.
   (b) If $x$ is an odd number then so are $x + 2$ and $x - 2$.
   (c) Nothing else is an odd number. [Q p.10]

(ii) (a) 5 is divisible by five.
    (b) If $x$ is divisible by five then so is $x + 5$.
    (c) Nothing else is divisible by five.
    Note: We are assuming here that ‘number’ means ‘positive integer’. If it is taken to mean ‘integer’ (i.e. positive, negative or zero) then the answer is:
    (a) 5 is divisible by five.
    (b) If $x$ is divisible by five then so are $x + 5$ and $x - 5$.
    (c) Nothing else is divisible by five. [Q p.10]

(iii) (a) $a$ is such a word; $b$ is such a word.
     (b) If $x$ is such a word then so are $xa$ and $xb$.
     (c) Nothing else is such a word. [Q p.10]

(iv) (a) Bob’s mother is in the set; Bob’s father is in the set.
     (b) If $x$ is in the set then so are $x$’s mother and $x$’s father.
     (c) Nothing else is in the set. [Q p.10]

(v) (a) hah hah hah is a cackle.
    (b) If $x$ is a cackle then so is $x$ hah.
    (c) Nothing else is a cackle. [Q p.10]

5. $(P \leftrightarrow Q)$ 1, 2 / (2ii)  
6. $((P \leftrightarrow Q) \leftrightarrow R)$ 3, 5 / (2ii)  
7. $(((P \leftrightarrow Q) \leftrightarrow R) \leftrightarrow S)$ 4, 6 / (2ii)

Main connective is $\leftrightarrow$.  

6.  1. $P$ / (2i)  
2. $\neg P$ 1 / (2ii)  
3. $\neg\neg P$ 2 / (2ii)  
4. $(\neg P \land \neg\neg P)$ 2, 3 / (2ii$\land$)  
5. $(P \land \neg P)$ 1, 2 / (2ii$\land$)  
6. $((\neg P \land \neg\neg P) \rightarrow (P \land \neg P))$ 4, 5 / (2ii$\rightarrow$)

Main connective is $\rightarrow$.

\[Q \text{ p.15}\]
Answers 3.5.1

1. No. None of our connectives has a truth table which matches the outputs of this truth function in all cases. [Q p.15]

2. | input | output of function $f_4^2$ | output of function $f_5^2$ |
<table>
<thead>
<tr>
<th></th>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>(T,T)</td>
<td>T</td>
<td>T</td>
</tr>
<tr>
<td>(T,F)</td>
<td>F</td>
<td>F</td>
</tr>
<tr>
<td>(F,T)</td>
<td>F</td>
<td>T</td>
</tr>
<tr>
<td>(F,F)</td>
<td>F</td>
<td>T</td>
</tr>
</tbody>
</table>

3. T [Q p.15]

4. (iv) You do not need to know any truth values. Whether $(A \rightarrow B)$ is T or F, $\star(A \rightarrow B)$ is T, because $\star$ sends both possible inputs (T and F) to T. [Q p.15]

5. $\rightarrow$. The outputs of $g$ are as follows:

<table>
<thead>
<tr>
<th>input</th>
<th>output of $g$</th>
</tr>
</thead>
<tbody>
<tr>
<td>(T,T)</td>
<td>T</td>
</tr>
<tr>
<td>(T,F)</td>
<td>F</td>
</tr>
<tr>
<td>(F,T)</td>
<td>T</td>
</tr>
<tr>
<td>(F,F)</td>
<td>T</td>
</tr>
</tbody>
</table>

These outputs match the truth table for $\rightarrow$ in every case.

NB To get the output of $g$ where the input is $(x, y)$, we first take $x$ as input to $f_1^2$, and then take the output of this, and $y$—in that order—as the inputs to $f_3^2$. The output of that is the output of $g$ for input $(x, y)$:

<table>
<thead>
<tr>
<th>$x$</th>
<th>$y$</th>
<th>$f_1^2(x)$</th>
<th>$f_3^2(f_1^2(x), y)$</th>
</tr>
</thead>
<tbody>
<tr>
<td>T</td>
<td>T</td>
<td>F</td>
<td>T</td>
</tr>
<tr>
<td>T</td>
<td>F</td>
<td>F</td>
<td>F</td>
</tr>
<tr>
<td>F</td>
<td>T</td>
<td>T</td>
<td>T</td>
</tr>
<tr>
<td>F</td>
<td>F</td>
<td>T</td>
<td>T</td>
</tr>
</tbody>
</table>

The rightmost column of this table gives us the outputs of $g$ for all possible values of $x$ and $y$, since $g(x, y) = f_3^2(f_1^2(x), y)$. [Q p.15]
Chapter 4

Uses of Truth Tables

Answers 4.1.2

1. Valid

F & F & T & T & T & F & T & F & T & F \\
F & F & F & F & T & F & T & T & F & T \\
\end{array} \]

(a) jointly unsatisfiable, because no row on which both true

(b) not equivalent because different truth values on e.g. *’ed row.

(c) not contradictory, because both false on e.g. †’ed row.

(d) contrary, because jointly unsatisfiable and not contradictory

9. \[ \begin{array}{cccc|cccc}
P & Q & (P \leftrightarrow Q) & (P \land Q) & \lor & (\neg P \land \neg Q) \\
\hline
* & T & T & T & T & F & F & F \\
T & F & F & F & F & T & F & T \\
F & T & F & F & F & T & F & T \\
F & F & T & T & T & T & T & T \\
\end{array} \]

(a) jointly satisfiable, because both true on e.g. row 1

(b) equivalent because same truth value on every row

(c) not contradictory, because jointly satisfiable

(d) not contrary, because jointly satisfiable
10. \[
\begin{array}{|c|c|c|c|c|c|c|}
\hline
P & Q & (P \leftrightarrow Q) & ((P \land Q) \lor (\neg P \land \neg Q)) \\
\hline
\ast & T & T & T & T & T & T \\
T & F & F & F & F & F & T \\
F & T & F & F & T & T & F \\
F & F & F & F & F & F & F \\
\hline
\end{array}
\]

(a) jointly satisfiable, because both true on e.g. row 1
(b) equivalent because same truth value on every row
(c) not contradictory, because jointly satisfiable
(d) not contrary, because jointly satisfiable

**Answers 4.4.1**

1. Satisfiable (\ast’ed row)

<table>
<thead>
<tr>
<th>P</th>
<th>Q</th>
<th>(P \lor Q)</th>
<th>\neg (P \land Q)</th>
</tr>
</thead>
<tbody>
<tr>
<td>T</td>
<td>T</td>
<td>T</td>
<td>F</td>
</tr>
<tr>
<td>T</td>
<td>F</td>
<td>T</td>
<td>T</td>
</tr>
<tr>
<td>F</td>
<td>T</td>
<td>T</td>
<td>F</td>
</tr>
<tr>
<td>F</td>
<td>F</td>
<td>F</td>
<td>T</td>
</tr>
</tbody>
</table>

2. Unsatisfiable

<table>
<thead>
<tr>
<th>P</th>
<th>Q</th>
<th>\neg (P \rightarrow Q)</th>
<th>(P \leftrightarrow Q)</th>
<th>(\neg P \lor Q)</th>
</tr>
</thead>
<tbody>
<tr>
<td>T</td>
<td>T</td>
<td>F</td>
<td>T</td>
<td>T</td>
</tr>
<tr>
<td>T</td>
<td>F</td>
<td>F</td>
<td>F</td>
<td>F</td>

<tr>
<td>F</td>
<td>T</td>
<td>T</td>
<td>F</td>
<td>T</td>
</tr>
<tr>
<td>F</td>
<td>F</td>
<td>F</td>
<td>T</td>
<td>T</td>
</tr>
</tbody>
</table>

3. Unsatisfiable
4. Unsatisfiable

\[
\begin{array}{cccc|cccc|c}
P & Q & R & (P \lor Q) & \lor & R & (\neg P \rightarrow \neg Q) & (\neg Q \rightarrow \neg R) & \neg P \\
\hline
T & T & T & \top & T & \top & \top & \top & F \\
T & T & F & \top & T & \top & \top & \top & F \\
T & F & T & \top & T & \top & \top & \top & F \\
T & F & F & \top & T & \top & \top & \top & F \\
F & T & T & \top & T & \top & \top & \top & F \\
F & T & F & \top & T & \top & \top & \top & F \\
F & F & T & \top & T & \top & \top & \top & F \\
F & F & F & \top & T & \top & \top & \top & F \\
\end{array}
\]

5. Satisfiable (*'ed row)

\[
\begin{array}{cccc|cccc|c}
P & Q & R & (P \leftrightarrow Q) & \lor & R & (Q \lor R) & (R \rightarrow P) & \\
\hline
* & T & T & T & T & T & T & \top & \top \\
T & T & F & T & T & T & T & \top & \top \\
T & F & T & F & T & T & T & \top & \top \\
T & F & F & F & T & T & T & \top & \top \\
F & T & T & F & T & T & T & \top & \top \\
F & T & F & F & T & T & T & \top & \top \\
F & F & T & F & T & T & T & \top & \top \\
F & F & F & F & T & T & T & \top & \top \\
\end{array}
\]

6. Satisfiable (*'ed row)

\[
\begin{array}{cccc|c|c}
P & Q & (\neg P \rightarrow \neg Q) & (P \leftrightarrow Q) & \\
\hline
* & T & T & \top & \top \\
T & F & \top & \top \\
F & T & \top & \top \\
F & F & \top & \top \\
\end{array}
\]

7. Unsatisfiable

\[
\begin{array}{cccc|c|c}
P & \neg P & (P \rightarrow (P \rightarrow \neg P)) & (\neg P \leftrightarrow P) & \\
\hline
T & F & T & T \\
F & T & T & T \\
\end{array}
\]
8. Unsatisfiable

\[ (P \lor \neg Q) \rightarrow \neg R \rightarrow (\neg R \rightarrow Q) \]

<table>
<thead>
<tr>
<th>P</th>
<th>Q</th>
<th>R</th>
<th>(P \lor \neg Q)</th>
<th>(P \rightarrow R)</th>
<th>\neg R</th>
<th>(\neg R \rightarrow Q)</th>

Chapter 5

Logical Form

Answers 5.1.1

Note: There are also other correct answers to questions 1–4.

1. (i) \( \neg (\alpha \rightarrow \beta) \)
   (ii) \( \neg (\alpha \rightarrow (\beta \rightarrow \gamma)) \)
   (iii) \( \neg (\alpha \rightarrow (\alpha \rightarrow \beta)) \)  \[Q p.20\]

2. (i) \( (\alpha \rightarrow \beta) \)
   (ii) \( (\alpha \rightarrow \alpha) \)
   (iii) \( ((\alpha \lor \beta) \rightarrow (\alpha \lor \beta)) \)  \[Q p.20\]

3. (i) \( \alpha \)
   (ii) \( \alpha \land \beta \)
   (iii) \( \alpha \land (\beta \rightarrow \gamma) \)  \[Q p.20\]

4. (i) \( \alpha \)
   (ii) \( \alpha \leftrightarrow \beta \)
   (iii) \( (\alpha \land \beta) \leftrightarrow \gamma \)  \[Q p.20\]
Answers 5.2.1

1. First form: $\neg\neg\alpha$
   
   (i) $\alpha : C$
   
   (ii) $\alpha : (A \land B)$
   
   (iii) $\alpha : (C \land \neg D)$

   Second form: $\neg\alpha$
   
   (i) $\alpha : \neg C$
   
   (ii) $\alpha : \neg(A \land B)$
   
   (iii) $\alpha : \neg(C \land \neg D)$

   Third form: $\alpha$
   
   (i) $\alpha : \neg\neg C$
   
   (ii) $\alpha : \neg\neg(A \land B)$
   
   (iii) $\alpha : \neg\neg(C \land \neg D)$

2. (i) (a) Yes: $\alpha : P$ ; $\beta : Q$. [Q p.21]
   
   (b) Yes: $\alpha : R$ ; $\beta : Q$. [Q p.21]
   
   (c) Yes: $\alpha : R$ ; $\beta : (R \rightarrow Q)$. [Q p.21]

   (ii) (a) Yes: $\alpha : P$ ; $\beta : Q$. [Q p.21]
   
   (b) Yes: $\alpha : P$ ; $\beta : P$. [Q p.21]
   
   (c) No. [Q p.21]

   (iii) (a) Yes: $\alpha : \neg P$ ; $\beta : Q$. [Q p.21]
   
   (b) Yes: $\alpha : P$ ; $\beta : \neg P$. [Q p.21]
   
   (c) No. [Q p.21]

   (iv) (a) No. [Q p.21]
   
   (b) No. [Q p.21]
   
   (c) Yes: $\alpha : \neg P$ ; $\beta : \neg P$ [Q p.21]
Answers 5.3.1

Note: There are also other correct answers to questions 1–4.

1. (i) \(\neg(\alpha \rightarrow (\alpha \rightarrow \beta))\)

\[ \therefore (\alpha \lor (\alpha \rightarrow \beta)) \]
replacements: \(\alpha : R ; \beta : Q\)

(ii) \(\neg(\alpha \rightarrow \beta)\)

\[ \therefore (\alpha \lor \beta) \]
replacements: \(\alpha : R ; \beta : (R \rightarrow Q)\)

(iii) \(\neg(\alpha \rightarrow (\beta \rightarrow \gamma))\)

\[ \therefore (\alpha \lor (\beta \rightarrow \gamma)) \]
replacements: \(\alpha : R ; \beta : R ; \gamma : Q\)

(iv) \(\alpha\)

\[ \therefore \beta \]
replacements: \(\alpha : \neg((R \rightarrow (R \rightarrow Q)) ; \beta : R \lor (R \rightarrow Q)) \) [Q p.21]

2. (i) \((\alpha \land \beta) \rightarrow \beta\)

\[ \neg\beta \]

\[ \therefore \neg(\alpha \land \beta) \]
replacements: \(\alpha : P ; \beta : Q\)

(ii) \(\alpha \rightarrow \beta\)

\[ \neg\beta \]

\[ \therefore \neg\alpha \]
replacements: \(\alpha : (P \land Q) ; \beta : Q\)

(iii) \(\alpha \rightarrow \beta\)

\(\gamma\)

\[ \therefore \neg\alpha \]
replacements: \(\alpha : (P \land Q) ; \beta : Q ; \gamma : \neg Q\)

(iv) \(\alpha\)

\(\beta\)

\[ \therefore \gamma \]
replacements: \(\alpha : (P \land Q) \rightarrow Q ; \beta : \neg Q ; \gamma : \neg (P \land Q) \) [Q p.22]
3. (i) \( \neg \alpha \rightarrow (\beta \rightarrow \gamma) \)
\[
\neg \alpha \\
\therefore \beta \rightarrow \gamma
\]
replacements: \( \alpha : Q ; \beta : R ; \gamma : S \)

(ii) \( \neg \alpha \rightarrow \beta \)
\[
\neg \alpha \\
\therefore \beta
\]
replacements: \( \alpha : Q ; \beta : (R \rightarrow S) \)

(iii) \( \alpha \rightarrow \beta \)
\[
\alpha \\
\therefore \beta
\]
replacements: \( \alpha : \neg Q ; \beta : (R \rightarrow S) \)

(iv) \( \alpha \bet \bet \therefore \gamma \)
replacements: \( \alpha : \neg Q \rightarrow (R \rightarrow S) ; \beta : \neg Q ; \gamma : (R \rightarrow S) \)

[Q p.22]

4. (i) \( (\alpha \rightarrow \neg \beta) \lor (\neg \beta \rightarrow \alpha) \)
\[
\neg(\neg \beta \rightarrow \alpha) \\
\therefore \alpha \rightarrow \neg \beta
\]
replacements: \( \alpha : P ; \beta : Q \)

(ii) \( (\alpha \rightarrow \beta) \lor (\beta \rightarrow \alpha) \)
\[
\neg(\beta \rightarrow \alpha) \\
\therefore \alpha \rightarrow \beta
\]
replacements: \( \alpha : P ; \beta : \neg Q \)

(iii) \( \alpha \lor \beta \)
\[
\neg \beta \\
\therefore \alpha
\]
replacements: \( \alpha : (P \rightarrow \neg Q) ; \beta : (\neg Q \rightarrow P) \)

(iv) \( \alpha \bet \bet \therefore \gamma \)
replacements: \( \alpha : (P \rightarrow \neg Q) \lor (\neg Q \rightarrow P) ; \bet : \neg(\neg Q \rightarrow P) ; \gamma : (P \rightarrow \neg Q) \)

[Q p.22]

Answers 5.4.1

1. (i) $\alpha : P$; $\beta : Q$

   (ii)\[
   \begin{array}{c|c|c}
   P & Q & P \rightarrow Q \\
   \hline
   T & T & T \\
   T & F & F \\
   F & T & T \\
   F & F & T \\
   \end{array}
   \]

2. (i) $\alpha : (A \land B)$; $\beta : (B \lor C)$

   (ii)\[
   \begin{array}{c|c|c|c|c}
   A & B & C & A \land B & (A \land B) \rightarrow (B \lor C) \\
   \hline
   T & T & T & T & T \\
   T & T & F & T & T \\
   T & F & T & F & T \\
   T & F & F & F & T \\
   F & T & T & F & T \\
   F & T & F & F & T \\
   F & F & T & F & T \\
   F & F & F & F & T \\
   \end{array}
   \]

3. (i) $\alpha : (A \lor \neg A)$; $\beta : (A \land \neg A)$

   (ii)\[
   \begin{array}{c|c|c|c|c}
   P & (A \lor \neg A) & (A \lor \neg A) \rightarrow (A \land \neg A) & (A \land \neg A) \\
   \hline
   T & T & F & F \\
   F & T & F & F \\
   \end{array}
   \]

4. (i) $\alpha : (P \rightarrow \neg P)$; $\beta : (P \rightarrow (Q \land \neg R))$

   (ii)\[
   \begin{array}{c|c|c|c|c|c|c}
   P & Q & R & (P \rightarrow \neg P) & (P \rightarrow \neg P) \rightarrow (P \rightarrow (Q \land \neg R)) & (P \rightarrow (Q \land \neg R)) \\
   \hline
   T & T & T & F & T & F \\
   T & T & F & F & T & T \\
   T & F & T & F & T & F \\
   T & F & F & F & T & F \\
   F & T & T & T & T & T \\
   F & T & F & T & T & T \\
   F & F & T & T & T & T \\
   F & F & F & T & T & T \\
   \end{array}
   \]

[Q p.22]

[Contents]
Answers 5.5.1

1. (i) \[
\begin{array}{c|c|}
\alpha & \beta \\
\hline
T & T \\
* & F \\
F & T \\
F & F \\
\end{array}
\]

Invalid: in *’ed row, the premise is T and the conclusion is F. [Q p.23]

(ii) Instance: \[ P \]
\[ \therefore P \]

Truth table: \[
\begin{array}{c|c|c|}
P & P \\
\hline
T & T \\
F & F \\
\end{array}
\]

Valid: there is no row in which the premise (P) is true and the conclusion (P) is false. [Q p.23]

2. \[ \alpha \lor \neg \alpha \]
\[ \therefore \alpha \land \neg \alpha \]

[Q p.23]

Answers 6.6.3

1. (i) Functionally complete:

<table>
<thead>
<tr>
<th>α</th>
<th>β</th>
<th>\neg(α \rightarrow \neg β)</th>
<th>(\neg α \rightarrow β)</th>
</tr>
</thead>
<tbody>
<tr>
<td>T</td>
<td>T</td>
<td>T</td>
<td>T</td>
</tr>
<tr>
<td>T</td>
<td>F</td>
<td>F</td>
<td>T</td>
</tr>
<tr>
<td>F</td>
<td>T</td>
<td>F</td>
<td>T</td>
</tr>
<tr>
<td>F</td>
<td>F</td>
<td>F</td>
<td>F</td>
</tr>
</tbody>
</table>

The second last column is the same as the truth table for \( α \land β \), and the last column is the same as the truth table for \( α \lor β \), so we have defined \( \land \) and \( \lor \) in terms of \( \neg \) and \( \rightarrow \). We already know
that \{\land, \lor, \neg\} is functionally complete, so this establishes that \{\neg, \rightarrow\} is functionally complete.

(Where do the columns come from? That is, it is easy to see, once the formula \neg(\alpha \rightarrow \neg\beta) is given, that this formula is equivalent to (\alpha \land \beta)—and similarly for (\neg\alpha \rightarrow \beta) and (\alpha \lor \beta)—but where do these formulas come from in the first place? The answer is: they come by trial and error, guided by knowledge of the relevant truth tables. We know what truth table we want to end up with—say, the truth table for (\alpha \land \beta)—and we know what connectives we are allowed to use—in this case \neg and \rightarrow—and what their truth tables are; we then play around with formulas involving different combinations of the allowed connectives until we find one that has the desired truth table.)

[A p.25]

(ii) Not functionally complete: we cannot define any connective which has an odd number of T’s in its truth table; e.g. \rightarrow (one T), \lor (three T’s) or \land (one T).

Consider the truth table for \alpha \leftrightarrow \beta. (We make no assumptions about how complex \alpha and \beta are—i.e. about how many connectives and basic propositions they contain—hence no assumptions about how many rows there are in this truth table.) \alpha \leftrightarrow \beta is T iff \alpha and \beta have the same truth value (both T or both F); \alpha \leftrightarrow \beta is F iff \alpha and \beta have opposite truth values (one T and the other F). Let us call a row in which \alpha \leftrightarrow \beta is true a ‘T row’ and a row in which it is false an ‘F row’, and let us say that a T is worth 1 point and an F is worth 0 points (this has no deep significance: it simply allows the following discussion to be presented in a simple way). If we sum the number of points in the \alpha and \beta columns (combined), each F row contributes 1 point, and each T row contributes either 2 points or 0 points. Now suppose there is an odd number of T rows (and hence an odd number of F rows, as there is an even number of rows in total in any truth table). Then the total number of points in the \alpha and \beta columns (combined) is an odd number (the number of F rows) plus some 2’s and 0’s—i.e. an odd number. That means that either \alpha is true in an odd number of rows and \beta is true in an even number of rows, or vice versa. Either way, it follows that \alpha \leftrightarrow \beta is true in an odd number of rows iff one of \alpha and \beta is true in an odd number of rows.

Consider the truth table for \alpha \lor \beta. \alpha \lor \beta is T iff \alpha and \beta have op-
posite truth values (one T and the other F); \( \alpha \lor \beta \) is F iff \( \alpha \) and \( \beta \) have the same truth value (both T or both F). If we sum the number of points in the \( \alpha \) and \( \beta \) columns (combined), each T row contributes 1 point, and each F row contributes either 2 points or 0 points. Now suppose there is an odd number of T rows (and hence an odd number of F rows). Then the total number of points in the \( \alpha \) and \( \beta \) columns (combined) is an odd number (the number of T rows) plus some 2’s and 0’s—i.e. an odd number. That means that either \( \alpha \) is true in an odd number of rows and \( \beta \) is true in an even number of rows, or vice versa. Either way, it follows that \( \alpha \lor \beta \) is true in an odd number of rows iff one of \( \alpha \) and \( \beta \) is true in an odd number of rows.

Now think about formulas that we can define using only \( \leftrightarrow, \lor \) and basic propositions. Each basic proposition is true in an even number of rows (half the rows in the table: recall how the matrix is laid out); and as we have just seen, any proposition built from \( \leftrightarrow \) or \( \lor \) and propositions which are true in an even number of rows, is itself true in an even number of rows. So every proposition that we can define using only \( \leftrightarrow, \lor \) and basic propositions has an even number of T’s in its truth table.

(Q p.25)

(iii) Functionally complete:

<table>
<thead>
<tr>
<th>( \alpha )</th>
<th>( \beta )</th>
<th>( \alpha \downarrow \alpha )</th>
<th>( (\alpha \downarrow \alpha) \downarrow (\beta \downarrow \beta) )</th>
<th>( (\alpha \downarrow \beta) \downarrow (\alpha \downarrow \beta) )</th>
</tr>
</thead>
<tbody>
<tr>
<td>T</td>
<td>T</td>
<td>F</td>
<td>T</td>
<td>T</td>
</tr>
<tr>
<td>T</td>
<td>F</td>
<td>F</td>
<td>F</td>
<td>T</td>
</tr>
<tr>
<td>F</td>
<td>T</td>
<td>T</td>
<td>F</td>
<td>T</td>
</tr>
<tr>
<td>F</td>
<td>F</td>
<td>T</td>
<td>F</td>
<td>F</td>
</tr>
</tbody>
</table>

The third last column is the same as the truth table for \( \neg \alpha \), the second last column is the same as the truth table for \( \alpha \land \beta \), and the last column is the same as the truth table for \( \alpha \lor \beta \), so we have defined \( \neg, \land \) and \( \lor \) in terms of \( \downarrow \). We already know that \{\land, \lor, \neg\} is functionally complete, so this establishes that \{\( \downarrow \)\} is functionally complete.

(Q p.25)

(iv) Not functionally complete: we cannot define any connective which has an F in the top row. When \( \alpha \) and \( \beta \) are both T, \( (\alpha \rightarrow \beta) \) is T and \( (\alpha \land \beta) \) is T—hence so is any formula, however complex, built up from \( \alpha \)'s, \( \beta \)'s, \( \rightarrow \)'s and \( \land \)'s. Hence no such formula is equivalent to \( \neg \alpha \), which is F when \( \alpha \) is T.

(Q p.25)
(v) Functionally complete:

<table>
<thead>
<tr>
<th>$\alpha$</th>
<th>$\beta$</th>
<th>$\neg (\neg \alpha \oplus_{12} \beta)$</th>
<th>$\alpha \oplus_{12} \neg \beta$</th>
</tr>
</thead>
<tbody>
<tr>
<td>T</td>
<td>T</td>
<td>T</td>
<td>T</td>
</tr>
<tr>
<td>T</td>
<td>F</td>
<td>T</td>
<td>F</td>
</tr>
<tr>
<td>F</td>
<td>T</td>
<td>T</td>
<td>F</td>
</tr>
<tr>
<td>F</td>
<td>F</td>
<td>F</td>
<td>F</td>
</tr>
</tbody>
</table>

The second last column is the same as the truth table for $\alpha \lor \beta$, and the last column is the same as the truth table for $\alpha \land \beta$, so we have defined $\land$ and $\lor$ in terms of $\neg$ and $\oplus_{12}$. We already know that $\{\land, \lor, \neg\}$ is functionally complete, so this establishes that $\{\neg, \oplus_{12}\}$ is functionally complete. \[Q \text{ p.25}\]

(vi) Not functionally complete: $(\alpha \oplus_{4} \beta)$ and $(\alpha \oplus_{4} \neg \alpha)$ are both equivalent to $\alpha$, and $(\beta \oplus_{4} \beta)$ and $(\beta \oplus_{4} \neg \alpha)$ are both equivalent to $\beta$, so we cannot express anything more with $\alpha$'s, $\beta$'s, $\lor$'s and $\oplus_{4}$'s than we can with just $\alpha$'s, $\beta$'s and $\lor$'s. But $\{\lor\}$ is not a functionally complete set of connectives (why not?), hence neither is $\{\lor, \oplus_{4}\}$. \[Q \text{ p.25}\]
3. Here are two ways to answer each part.

First, we can form a disjunction of row descriptions, in the way explained in §6.6.2, pp.129–131. This gives:

(i) \((\alpha \land \beta \land \gamma) \lor (\alpha \land \neg \beta \land \neg \gamma) \lor (\neg \alpha \land \beta \land \gamma) \lor (\neg \alpha \land \neg \beta \land \gamma)\)  

(ii) \((\alpha \land \neg \beta \land \gamma) \lor (\alpha \land \neg \beta \land \neg \gamma) \lor (\neg \alpha \land \beta \land \gamma) \lor (\neg \alpha \land \beta \land \neg \gamma)\)  

Alternatively, we can use the following hints, to get:

(i) \((\neg \beta \lor \gamma) \lor (\beta \land \neg \gamma)\)  

(Hint: Look at the truth table for \(\tilde{\gamma}(\alpha, \beta, \gamma)\), and note that it is equivalent to \((\beta \rightarrow \gamma)\).)

(ii) \((\alpha \lor \beta) \land \neg (\alpha \land \beta)\)  

(Hint: Look at the truth table for \(\tilde{\gamma}(\alpha, \beta, \gamma)\), and note that it is equivalent to \((\alpha \lor \beta)\).)

There are also other correct answers to (i) and (ii).

4. (i) \((A \land \neg B)\)  
(ii) \((\neg A \land \neg B)\)  
(iii) \((\neg (A \land B))\)  
(iv) \((A \land \neg B)\)  
(v) \((\neg (A \land \neg B)) \land (B \land \neg A)\)  
(vi) \((\neg (A \land \neg A))\)

5. (i) \(\oplus_4\)
(ii) $\exists_{14}$

(iii) $\exists_2$ and $\neg$

(iv) $\exists_4, \exists_6, \exists_{11}$ and $\exists_{13}$

10. Not a tautology. False when, e.g., \( A \) is T, \( B \) is T and \( C \) is F: [Q p.31]

\[\neg((A \land (B \lor C)) \leftrightarrow ((A \lor B) \land C)) \checkmark\]

\[\neg((A \lor B) \land C) \checkmark \quad \neg(A \land (B \lor C)) \checkmark \quad ((A \lor B) \land C) \checkmark \quad (A \lor B) \checkmark\]

\[\neg(A \lor B) \checkmark \quad \neg C \quad \neg A \quad \neg(B \lor C) \checkmark\]

\[\neg A \quad \neg B \quad \neg C \quad \neg A \quad \neg B \quad \neg C\]

[Contents]

**Answers 7.3.5.1**

1. Equivalent: [Q p.31]

\[\neg(P \leftrightarrow (P \land P)) \checkmark\]

\[\neg P \quad P \quad (P \land P) \checkmark \quad \neg(P \land P) \checkmark\]

\[P \quad \neg P \quad \neg P \quad P \quad \neg P \quad \neg P\]

\[\times \quad \times \quad \times \quad \times \quad \times \quad \times\]

2. Equivalent: [Q p.31]

\[\neg((P \rightarrow (Q \lor \neg Q)) \leftrightarrow (R \rightarrow R)) \checkmark\]

\[\neg (P \rightarrow (Q \lor \neg Q)) \quad \neg (P \rightarrow (Q \lor \neg Q)) \checkmark \quad (R \rightarrow R) \checkmark \quad (R \rightarrow R) \checkmark\]

\[R \quad \neg R \quad P \quad \neg Q \quad \neg Q \quad \neg Q \quad \neg Q \quad \neg Q \quad \neg Q \quad \neg Q \quad \neg Q \quad \neg Q \quad Q \quad \times\]

151
3. Equivalent: 

\[ \neg(\neg(A \lor B) \leftrightarrow (\neg A \land \neg B)) \] [Q p.31]

4. Not equivalent. Different truth values when, e.g., \( A \) is F and \( B \) is T:

\[ \neg(\neg(A \lor B) \leftrightarrow (\neg A \lor \neg B)) \] [Q p.31]

5. Not equivalent. Different truth values when, e.g., \( A \) is F and \( B \) is T:

\[ \neg(\neg(A \land B) \leftrightarrow (\neg A \land \neg B)) \] [Q p.31]
6. Equivalent. 

\[\neg(- (A \land B) \leftrightarrow (\neg A \lor \neg B)) \checkmark\]

\[\neg(A \land B) \checkmark \quad \neg(- (A \land B)) \checkmark\]

\[\neg(- A \lor \neg B) \checkmark \quad (- A \lor \neg B) \checkmark\]

\[- A \checkmark \quad (A \land B) \checkmark\]

\[\neg B \checkmark \quad A\]

\[B \]

\[-A \quad \neg B \]

\[\times \quad \times\]

7. Equivalent. 

\[\neg(A \leftrightarrow ((A \land B) \lor (A \land \neg B))) \checkmark\]

\[\neg((A \land B) \lor (A \land \neg B)) \checkmark \quad ((A \land B) \lor (A \land \neg B)) \checkmark\]

\[\neg(A \land B) \checkmark \quad (A \land B) \checkmark \quad (A \land \neg B) \checkmark\]

\[\neg(A \land \neg B) \checkmark \quad \neg(A \land \neg B) \checkmark \quad \neg(A \land \neg B) \checkmark\]

\[-A \quad \neg B\]

\[\times \quad \times\]

\[-A \quad \neg B \]

\[\times \quad \times\]

\[\times\]

\[\times\]
8. Equivalent. [Q p.31]
\[-(\neg(P \leftrightarrow Q) \leftrightarrow ((P \land \neg Q) \lor (\neg P \land Q))) \checkmark\]

9. Equivalent. [Q p.31]
\[-(((P \land Q) \rightarrow R) \leftrightarrow (P \rightarrow (\neg Q \lor R))) \checkmark\]
10. Not equivalent. Different truth values when $P$ is T and $Q$ is F:

\[
\neg(\neg(P \leftrightarrow Q) \leftrightarrow (Q \land \neg P)) \checkmark
\]

\[
\neg(P \leftrightarrow Q) \checkmark
\]

\[

Chapter 8

The Language of Monadic Predicate Logic

Answers 8.2.1

Glossary:

- $b$: Bill
- $B$: is beautiful
- $c$: Canberra
- $C$: is a capital city
- $d$: Ben
- $E$: is even
- $e$: Jenny
- $G$: is a gardener
- $j$: John
- $H$: is happy
- $l$: Pluto
- $K$: is kite flying
- $m$: Mary
- $N$: is nice
- $n$: New York
- $P$: is a prime number
- $p$: The Pacific Ocean
- $R$: is grumpy
- $q$: seven (7)
- $S$: is small
- $r$: Rover
- $T$: is a planet
- $s$: Steve
- $V$: is heavily populated
- $t$: two (2)
- $W$: is winning
- $A$: is sailing
- $Y$: is tiny

Translations:

1. $Bp$  
   [Q p.32]
2. $Vn$  
   [Q p.32]
3. $Nm$  
   [Q p.32]
4. $Rj$

5. $Pq$

6. $Tl$

7. $Gb \land Gd$

8. $(Am \lor Ke) \rightarrow (Rb \land Rd)$

9. $\neg (Am \lor Km)$

10. $Ke \rightarrow Am$

11. $(Aj \lor Kj) \land \neg (Aj \land Kj)$

12. $\neg Am \rightarrow (\neg Kj \rightarrow Aj)$

13. $Ae \rightarrow (Am \land Aj)$

14. $(Aj \lor Am) \rightarrow Ae$

15. $Am \leftrightarrow Ke$

16. $Ws \rightarrow \neg Hm$

17. $Pt \land Et$

18. $Sc \land \neg Yc \land Cc$

19. $Kr \rightarrow \neg Pt$

20. $Hm \leftrightarrow \neg He$
Answers 8.3.2

Glossary:

- $Cx$: $x$ is certain
- $Rx$: $x$ is red
- $Ex$: $x$ is expensive
- $Wx$: $x$ is worthwhile
- $Fx$: $x$ is fun
- $Gx$: $x$ is green
- $Hx$: $x$ is heavy
- $i$: Independence Hall
- $k$: Kermit
- $p$: Oscar’s piano
- $s$: Spondulix

Translations:

1. $Ri \rightarrow \exists x Rx$  
   \[Q \text{ p.33}\]
2. $\forall x Rx \rightarrow Ri$  
   \[Q \text{ p.33}\]
3. $\neg \exists x (Gx \land Rx)$  
   \[Q \text{ p.33}\]
4. $\neg \neg \exists x (Gx \land Rx)$  
   \[Q \text{ p.33}\]
5. This can be interpreted in two ways. The most natural interpretation is (i) no red thing is green; but we could also take it to mean (ii) not every red thing is green (i.e. some red things are not green).
   
   (i) $\forall x (Rx \rightarrow \neg Gx)$
   
   (“Pick anything at all: if it is red, then it is not green.”)
   
   or equivalently: $\neg \exists x (Rx \land Gx)$
   
   (“There does not exist anything which is both red and green.”)
   
   (ii) $\neg \forall x (Rx \rightarrow Gx)$ or equivalently: $\exists x (Rx \land \neg Gx)$  
   \[Q \text{ p.33}\]
6. $\forall x (Rx \rightarrow (Hx \lor Ex))$  
   \[Q \text{ p.33}\]
7. $\forall x((Rx \land \neg Hx) \rightarrow Ex)$  
   \[Q \text{ p.33}\]
   (“Pick anything at all: if it is red and not heavy, then it is expensive.”)
8. $\forall x (Rx \rightarrow Hx) \land \exists x (Gx \land \neg Hx)$  
   \[Q \text{ p.33}\]
9. $\forall x (Rx \rightarrow Hx) \land \neg \forall x (Hx \rightarrow Rx)$  
   \[Q \text{ p.33}\]
10. $\exists x (Rx \land Hx) \land \exists x (Gx \land Hx)$  
    \[Q \text{ p.33}\]
11. $\exists x (Rx \land \neg Hx) \land \exists x (Hx \land \neg Rx)$  
    \[Q \text{ p.33}\]
12. \((Gk \land Rk) \rightarrow \neg\neg\exists x(Gx \land Rx)\)  

13. \(Hp \land \neg(Rp \lor Ep)\)  

14. \((Hs \land Es \land \forall x(Ex \rightarrow Rx) \land \forall x(Hx \rightarrow Gx)) \rightarrow (Rs \landGs)\)  

15. \(Hk \rightarrow \exists x(Gx \land Hx)\)  

16. \(\forall xFx \rightarrow \neg\exists xWx\)  

17. \(\exists xFx \land \exists xWx \land \neg\exists x(Fx \land Wx)\)  

18. \(\neg\exists xCx \rightarrow \neg\exists xPx\)  

19. \(\exists xPx \land \exists x\neg Px \land \neg\exists xCx\)  

20. \(\forall x(Cx \rightarrow Px)\)  

**Answers 8.3.5**

**Glossary:**

\(Ax\): \(x\) can stay \hspace{1cm} \(Rx\): \(x\) is telling the truth
\(Bx\): \(x\) is brown \hspace{1cm} \(Sx\): \(x\) is sad
\(Cx\): \(x\) works at this company \hspace{1cm} \(Tx\): \(x\) is in trouble
\(Fx\): \(x\) is a leaf \hspace{1cm} \(Ux\): \(x\) is laughing
\(Gx\): \(x\) is grey \hspace{1cm} \(Yx\): \(x\) is lying
\(Hx\): \(x\) is happy \hspace{1cm} \(g\): Gary
\(Lx\): \(x\) is laughing \hspace{1cm} \(s\): the sky
\(Ox\): \(x\) is in this room \hspace{1cm} \(t\): Stephanie
\(Px\): \(x\) is a person

**Translations:**

1. \(\forall x(Px \rightarrow Hx)\)  

2. \(\exists x(Px \land Sx)\)  

3. \(\neg\exists x(Px \land Hx \land Sx)\)  

4. \(\exists x(Px \land Sx) \rightarrow \neg\forall x(Px \rightarrow Hx)\)
5. \( \forall x( Px \rightarrow (\neg Hx \rightarrow \neg Lx)) \)
   or \( \forall x((Px \land Lx) \rightarrow Hx) \)
   or \( \neg \exists x(Px \land Lx \land \neg Hx) \) [Q p.34]

6. \( Lg \rightarrow \exists x(Px \land Hx) \) [Q p.34]

7. \( \forall x((Px \land Lx) \rightarrow Hx) \) [Q p.34]

8. \( Lg \rightarrow \forall x(Px \rightarrow Lx) \) [Q p.34]

9. \( \exists x(Px \land Sx) \land \neg \forall x(Px \rightarrow Sx) \land \neg Sg \) [Q p.35]

10. \( \neg \forall x(Px \rightarrow Sx) \rightarrow \neg Hg \) [Q p.35]

11. \( \forall x(Fx \rightarrow Bx) \land Gs \) [Q p.35]

12. \( \exists x(Fx \land Bx) \land \neg \forall x(Fx \rightarrow Bx) \) [Q p.35]

13. \( \forall x(Bx \rightarrow Fx) \) [Q p.35]

14. This could be saying either of two things:
   (i) that the only leaves that can stay are the brown ones (but maybe non-leaves can stay too):
   \( \forall x((Ax \land Fx) \rightarrow Bx) \) or \( \forall x(Fx \rightarrow (Ax \rightarrow Bx)) \)
   (ii) that the only things that can stay are brown leaves:
   \( \forall x(Ax \rightarrow (Fx \land Bx)) \) [Q p.35]

15. \( \neg Hg \rightarrow \forall x(Px \rightarrow Tx) \) [Q p.35]

16. \( \neg Hg \rightarrow \forall x((Px \land Cx) \rightarrow Tx) \) [Q p.35]

17. \( Rt \rightarrow \exists x(Px \land Yx) \) [Q p.35]

18. \( \neg \exists x(Px \land Yx) \rightarrow Rt \) [Q p.35]

19. \( Yt \lor (\neg \exists x(Px \land Rx) \land \forall x(Px \rightarrow Tx)) \) [Q p.35]

20. \( Yg \rightarrow \neg \forall x((Px \land Ox) \rightarrow Rx) \) [Q p.35]

4. (i) (a) Domain: \{1, 2, 3, \ldots\}
        Extensions: \(F: \{1, 2\} \quad G: \{1, 2, 3\}\)
   (b) Domain: \{1, 2, 3, \ldots\}
        Extensions: \(F: \{1, 2\} \quad G: \{1\}\)

   (ii) (a) No such model. For the formula to be true on a model, it would have to be the case that all members of the (non-empty) domain were in the extension of \(F\) (so that the first conjunct were true) and also that a certain member of the domain were not in the extension of \(F\) (so that the second conjunct were true).
(b) Domain: \{1, 2, 3, \ldots \}
Reference of \(a\): 2
Extension of \(F\): \{2, 4, 6, \ldots \} [Q p.42]

(iii) (a) Domain: \{1, 2, 3, \ldots \}
Reference of \(a\): 1
Extension of \(F\): \{2, 4, 6, \ldots \}
(b) Domain: \{1, 2, 3, \ldots \}
Reference of \(a\): 1
Extension of \(F\): \{1, 3, 5, \ldots \} [Q p.42]

(iv) (a) Domain: \{1, 2, 3, \ldots \}
Extensions: \(F\): \{1, 2, 3, \ldots \} \quad G: \{2, 4, 6, \ldots \}
(b) Domain: \{1, 2, 3, \ldots \}
Extensions: \(F\): \{1, 3, 5, \ldots \} \quad G: \{2, 4, 6, \ldots \} [Q p.42]

(v) (a) Domain: \{1, 2, 3, \ldots \}
Extension of \(F\): \{1, 3, 5, \ldots \}
(b) No such model. For the formula to be false on a model, it
would have to be the case that, in that model, some member
of the domain were both in the extension of \(F\) and not in the
extension of \(F\) [Q p.42]

(vi) (a) Domain: \{1, 2, 3, \ldots \}
Extensions: \(F\): \{1, 3, 5, \ldots \} \quad G: \{2, 4, 6, \ldots \}
(b) Domain: \{1, 2, 3, \ldots \}
Extensions: \(F\): \{1, 3, 5, \ldots \} \quad G: \emptyset [Q p.42]

(vii) (a) Domain: \{1, 2, 3, \ldots \}
Extension of \(F\): \{1, 3, 5, \ldots \}
(b) No such model. For the formula to be false on a model, it
would have to be the case that all members of the (non-
empty) domain were in the extension of \(F\) (to make the an-
tecedent true) and that no members of the domain were in
the extension of \(F\) (to make the consequent false) [Q p.42]

(viii) (a) No such model. For the formula to be true on a model,
it would have to be the case that, in that model, a single
member of the domain were both in the extension of \(F\) and
not in the extension of \(F\).
(b) Domain: \{1, 2, 3, \ldots \}
Extension of \(F\): \{1, 3, 5, \ldots \} [Q p.42]

(ix) (a) Domain: \{1, 2, 3, \ldots \}
Extension of \(F\): \{1, 3, 5, \ldots \}
(b) Domain: \{1,2,3,\ldots\}
Extension of \(F: \emptyset\) \[Q \text{p.42}\]

(x) (a) Domain: \{1,2,3,\ldots\}
Extension of \(F: \{1,3,5,\ldots\}\)
No such model. For the formula to be false on a model, it would have to be the case that, in that model, a single member of the domain were both in the extension of \(F\) and not in the extension of \(F\). \[Q \text{p.42}\]

(xi) (a) Domain: \{1,2,3,\ldots\}
Extensions: \(F:\{1\}\) \(G:\{2\}\)

(b) Domain: \{1,2,3,\ldots\}
Extensions: \(F:\{1\}\) \(G:\emptyset\) \[Q \text{p.42}\]

(xii) (a) Domain: \{1,2,3,\ldots\}
Extensions: \(F:\{1\}\) \(G:\{1,2,3,\ldots\}\)

Extensions: \(F:\{1\}\) \(G:\{1\}\) \[Q \text{p.42}\]

(xiii) (a) Domain: \{1,2,3,\ldots\}
Referents: \(a:1\)
Extensions: \(F:\{1\}\)

(b) No such model. For the formula to be false on a model, it would have to be that all members of the domain were in the extension of \(F\), but the referent of \(a\) was not. \[Q \text{p.42}\]

(xiv) (a) Domain: \{1,2,3,\ldots\}
Referents: \(a:1\)
Extensions: \(F:\{1,2,3,\ldots\}\)

(b) Domain: \{1,2,3,\ldots\}
Referents: \(a:2\)
Extensions: \(F:\{1\}\) \[Q \text{p.42}\]

(xv) (a) Domain: \{1,2\}
Referents: \(a:1\) \(b:2\)
Extensions: \(F:\{1,2\}\)

(b) Domain: \{1,2\}
Referents: \(a:1\) \(b:2\)
Extensions: \(F:\{1\}\) \[Q \text{p.42}\]
(xvi) (a) Domain: \{1, 2, 3, \ldots \}
Extensions: F : \{1, 3, 5, \ldots \}, G : \{2, 4, 6, \ldots \}
(b) Domain: \{1, 2, 3, \ldots \} Extensions: F : \{1\}, G : \{2\} [Q p.42]

(xvii) (a) Domain: \{1, 2, 3, \ldots \}
Extensions: F : \{1\}, G : \emptyset
(b) Domain: \{1, 2, 3, \ldots \}
Extensions: F : \emptyset, G : \emptyset [Q p.42]

(xviii) (a) No such model. For the formula to be true on a model, it would have to be that each member of the domain was both in the extension of F and also not in the extension of F.

(b) Domain: \{1, 2, 3, \ldots \}
Extensions: F : \{1\}

(xix) (a) Domain: \{1, 2, 3, \ldots \}
Extensions: F : \emptyset, G : \{1\}
(b) Domain: \{1, 2, 3, \ldots \}
Extensions: F : \{1, 2, 3, \ldots \}, G : \emptyset [Q p.42]

(xx) (a) Domain: \{1, 2, 3, \ldots \}
Extensions: F : \emptyset, G : \{1\}
(b) Domain: \{1, 2, 3, \ldots \}
Extensions: F : \{1, 2, 3, \ldots \}, G : \emptyset [Q p.42]

5. (i) True.
Suppose there are no F’s. Then, whatever in the domain d (a new name) refers to, \( Fd \) is false—so \( Fd \rightarrow Gd \) is true (because its antecedent is false). So \( \forall x(Fx \rightarrow Gx) \) is true when there are no F’s. [Q p.42]

(ii) No.
If there are no F’s, \( \forall x(Fx \rightarrow Gx) \) is true (previous question), but \( \exists x(Fx \land Gx) \) is false. [Q p.42]

[Contents]

170
1. Countermodel:
   Domain: \{1, 2\}
   Extensions: \( F : \{1\} \quad G : \{2\} \)\ [Q p.43]

2. No countermodel. For the premise to be true, there must be at least one object in the domain which is in the extension of \( F \) and is also in the extension of \( G \). If this is so, then any such object is *a fortiori* in the extension of \( F \)—making the left conjunct of the conclusion true—and in the extension of \( G \)—making the right conjunct of the conclusion true: hence the conclusion is true. \ [Q p.43]

3. Countermodel:
   Domain: \{1, 2\}
   Extensions: \( F : \{2\} \quad G : \{1\} \)\ [Q p.43]

4. No countermodel. For the first premise to be true, the extension of \( F \) must be a subset of the extension of \( G \). For the second premise to be true, the extension of \( G \) must be a subset of the extension of \( H \). It follows that the extension of \( F \) is a subset of the extension of \( H \)—and this makes the conclusion true. \ [Q p.43]

5. Countermodel:
   Domain: \{1, 2, 3\}
   Extensions: \( F : \{1\} \quad G : \{1, 2\} \quad H : \{1, 2, 3\} \)\ [Q p.43]

[Q p.51]

Answers 12.2.2

1. (i) False [Q p.52]

(ii) True [Q p.52]

(iii) False [Q p.52]

(iv) True (Ldb is true if we let the new name d refer to 1.) [Q p.52]

(v) False (The extension of L contains no ordered pair whose second member is 1, which is the referent of a; so no matter what the new name d refers to, Lda is false.) [Q p.52]
(vi) False (The extension of $L$ contains no ordered pair which has the same object in both first and second place, so there is no possible choice of referent for the new name $d$ which makes $Ldd$ true.) \[Q \text{ p.52}\]

(vii) True (No matter what we pick as the referent of $d$, we can then pick a referent for $e$ such that $Lde$ is true.) \[Q \text{ p.52}\]

(viii) False (If we pick 1 as the referent of $d$, then we cannot pick a referent for $e$ such that $Led$ is true.) \[Q \text{ p.52}\]

(ix) False (There is no object in the domain which is both in the extension of $P$, and in the first place of an ordered pair in the extension of $L$ which has 2, which is the referent of $b$, in second place; so there is no possible choice of referent for the new name $d$ which makes both $Pd$ and $Ldb$ true.) \[Q \text{ p.52}\]

(x) True \[Q \text{ p.52}\]

(xi) True \[Q \text{ p.52}\]

(xii) True \[Q \text{ p.52}\]

(xiii) False \[Q \text{ p.52}\]

(xiv) True \[Q \text{ p.52}\]

(xv) False \[Q \text{ p.52}\]

(xvi) False \[Q \text{ p.52}\]

(xvii) False \[Q \text{ p.52}\]

(xviii) True \[Q \text{ p.52}\]

2. (i) False \[Q \text{ p.53}\]

(ii) False \[Q \text{ p.53}\]

(iii) False \[Q \text{ p.53}\]

(iv) True \[Q \text{ p.53}\]

(v) True \[Q \text{ p.53}\]

(vi) False \[Q \text{ p.53}\]

(vii) True \[Q \text{ p.53}\]

(viii) False \[Q \text{ p.53}\]

(ix) False \[Q \text{ p.53}\]

(x) True \[Q \text{ p.53}\]

3. (i) False \[Q \text{ p.53}\]
(ii) True [Q p.53]
(iii) True [Q p.53]
(iv) True [Q p.54]
(v) False (e.g. \( \langle Alice, Bob \rangle \) and \( \langle Bob, Alice \rangle \) are in the extension of \( S \) but \( \langle Alice, Alice \rangle \) isn’t.) [Q p.54]
(vi) False [Q p.54]
(vii) False [Q p.54]
(viii) False [Q p.54]
(ix) True [Q p.54]
(x) True [Q p.54]

4. (i) (a) Domain: \{1, 2, 3\}
    Extension of \( F \): \{\( \langle 1, 1 \rangle \), \( \langle 2, 2 \rangle \), \( \langle 3, 3 \rangle \}\}

(b) Domain: \{1, 2, 3\}
    Extension of \( F \): \{\( \langle 1, 1 \rangle \), \( \langle 2, 2 \rangle \}\} [Q p.54]

(ii) (a) Domain: \{1, 2, 3\}
    Extension of \( F \): \{\( \langle 1, 2 \rangle \), \( \langle 2, 1 \rangle \}\}

(b) Domain: \{1, 2, 3\}
    Extension of \( F \): \{\( \langle 1, 2 \rangle \}\} [Q p.54]

(iii) (a) Domain: \{1, 2, 3\}
    Extension of \( F \): \{\( \langle 1, 1 \rangle \), \( \langle 2, 3 \rangle \), \( \langle 3, 2 \rangle \}\}

(b) Domain: \{1, 2, 3\}
    Extension of \( F \): \{\( \langle 1, 1 \rangle \), \( \langle 2, 3 \rangle \}\} [Q p.54]

(iv) (a) Domain: \{1, 2, 3\}
    Extension of \( F \): \{\( \langle 1, 1 \rangle \), \( \langle 1, 2 \rangle \), \( \langle 1, 3 \rangle \}\}

(b) Domain: \{1, 2, 3\}
    Extension of \( F \): \{\( \langle 1, 2 \rangle \), \( \langle 1, 3 \rangle \}\} [Q p.54]

(v) (a) Domain: \{1, 2, 3\}
    Extension of \( F \): \{\( \langle 1, 2 \rangle \), \( \langle 2, 3 \rangle \), \( \langle 3, 1 \rangle \}\}

(b) Domain: \{1, 2, 3\}
    Extension of \( F \): \{\( \langle 1, 1 \rangle \), \( \langle 1, 2 \rangle \), \( \langle 1, 3 \rangle \}\} [Q p.54]

(vi) (a) Domain: \{1, 2, 3\}
    Extension of \( F \): \{\( \langle 1, 1 \rangle \}\}

(b) Domain: \{1, 2, 3\}
    Extension of \( F \): \( \emptyset \) [Q p.54]
(vii) (a) Domain: \( \{1\} \)
    Extension of \( F \) : \( \{(1, 1)\} \)

(b) Domain: \( \{1\} \)
    Extension of \( F \) : \( \emptyset \) \( [Q \ p.54] \)

(viii) (a) Domain: \( \{1, 2, 3\} \)
       Referent of \( a \): 1
       Extension of \( F \) : \( \{(1, 2)\} \)

(b) Domain: \( \{1, 2, 3\} \)
       Referent of \( a \): 1
       Extension of \( F \) : \( \{(1, 1)\} \) \( [Q \ p.54] \)

(ix) (a) No such model. For the proposition to be true, the ordered pair consisting of the referent of \( a \), followed by the referent of \( a \), would have to both be in the extension of \( F \) and not in the extension of \( F \)

(b) Domain: \( \{1, 2, 3\} \)
       Referent of \( a \): 1
       Extension of \( F \) : \( \{(1, 1)\} \) \( [Q \ p.54] \)

(x) (a) No such model. For the second and third conjuncts to be true, the extension of \( F \) must contain the ordered pair of the referent of \( a \) followed by the referent of \( b \), but must not contain the ordered pair obtained by switching the order of these two referents. This is incompatible with the first conjunct.

(b) Domain: \( \{1, 2, 3\} \)
       Referents: \( a \): 1  \( b \): 2
       Extension of \( F \) : \( \{(1, 1)\} \) \( [Q \ p.54] \)

   $Ox$: $x$ is odd
   $Lxy$: $x < y$

   (i) $s(a_2,a_2) = a_4$ [Q p.66]
   (ii) $p(a_2,a_2) = a_4$ [Q p.66]
   (iii) $s(a_2,a_2) = p(a_2,a_2)$ [Q p.66]
   (iv) $q(a_2) = p(a_2,a_2)$ [Q p.66]
   (v) $\forall x \forall y q(s(x,y)) = p(s(x,y), s(x,y))$ [Q p.66]
(vi) $\forall x\forall y q(s(x,y)) = s(s(q(x), p(a_2, p(x,y))), q(y))$

Note that we have represented $2xy$ using the two-place function symbol $p$. This means that we have to represent it as $p(a_2, p(x,y))$—i.e. $2 \times (x \times y)$—or as $p(p(a_2, x), y)$—i.e. $(2 \times x) \times y$. Both choices are equally good. Similar comments apply to representing $x^2 + 2xy + y^2$ using the two-place function symbol $s$. [Q p.66]

(vii) $\forall x((Ex \lor Ox) \rightarrow Ep(a_2,x))$ [Q p.66]

(viii) $\forall x((Ox \rightarrow Op(a_3,x)) \land (Ex \rightarrow Ep(a_3,x)))$ [Q p.66]

(ix) $\forall x Lp(a_5,x)p(a_6,x)$ [Q p.66]

(x) $\forall x \forall y (Lxy \rightarrow Lp(a_3,x)p(a_4,y))$ [Q p.66]

Answers 14.1.2.1

1. Let $p$ be a path featuring $(\alpha \land \beta)$. Suppose there is a model $\mathcal{M}$ on which every proposition on $p$ is true. Let $p'$ be the path obtained from $p$ by adding $\alpha$ and $\beta$. By clause 3 of §9.4.2, we know that $\alpha$ must be true on $\mathcal{M}$, since $(\alpha \land \beta)$ is. By clause 3 of §9.4.2, we know that $\beta$ must
be true on $M$, since $(\alpha \land \beta)$ is. Since $\alpha$ and $\beta$ are the only propositions that were added to $p$ to get $p'$, we know that every proposition on $p'$ is true on $M$. So there is a model on which all propositions on $p'$ are true. Therefore the tree rule for unnegated conjunction is truth-preserving. [Q p.71]

2. Let $p$ be a path featuring $\neg(\alpha \land \beta)$. Suppose there is a model $M$ on which every proposition on $p$ is true. Let $q$ be the path obtained from $p$ by adding $\neg \alpha$, and let $r$ be the path obtained from $p$ by adding $\neg \beta$. Since $\neg(\alpha \land \beta)$ is true on $M$, we know that $(\alpha \land \beta)$ is false on $M$, by clause 2 of §9.4.2. Thus, either $\alpha$ is false on $M$ or $\beta$ is false on $M$, by clause 3 of §9.4.2. Thus, either $\neg \alpha$ is true on $M$ or $\neg \beta$ is true on $M$, by clause 2 of §9.4.2. Thus, either all propositions on $q$ are true on $M$, or all propositions on $r$ are true on $M$. So either there is a model on which every proposition on $q$ is true, or there is a model on which every proposition on $r$ is true. Therefore the tree rule for negated conjunction is truth-preserving. [Q p.71]

3. Let $p$ be a path featuring $(\alpha \rightarrow \beta)$. Suppose there is a model $M$ on which every proposition on $p$ is true. Let $q$ be the path obtained from $p$ by adding $\neg \alpha$, and let $r$ be the path obtained from $p$ by adding $\beta$. Since $(\alpha \rightarrow \beta)$ is true on $M$, we know that either $\alpha$ is false on $M$ or $\beta$ is true on $M$, by clause 6 of §9.4.2. Thus, either $\neg \alpha$ is true on $M$ or $\neg \beta$ is true on $M$, by clause 2 of §9.4.2. Thus, either all propositions on $q$ are true on $M$, or all propositions on $r$ are true on $M$. So either there is a model on which every proposition on $q$ is true, or there is a model on which every proposition on $r$ is true. Therefore the tree rule for negated conditional is truth-preserving. [Q p.71]

4. Let $p$ be a path featuring $\neg(\alpha \rightarrow \beta)$. Suppose there is a model $M$ on which every proposition on $p$ is true. Let $p'$ be the path obtained from $p$ by adding $\alpha$ and $\neg \beta$. Since $\neg(\alpha \rightarrow \beta)$ is true on $M$, we know that $\alpha \rightarrow \beta$ is false on $M$, by clause 2 of §9.4.2. So $\alpha$ is true on $M$ and $\beta$ is false on $M$, by clause 6 of §9.4.2. So $\alpha$ is true on $M$ and $\neg \beta$ is true on $M$, by clause 2 of §9.4.2. So all propositions on $p'$ are true on $M$. So there is a model on which all propositions on $p'$ are true. Therefore the tree rule for negated conditional is truth-preserving. [Q p.71]

5. Let $p$ be a path featuring $(\alpha \leftrightarrow \beta)$. Suppose there is a model $M$ on which every proposition on $p$ is true. Let $q$ be the path obtained from $p$ by adding $\alpha$ and $\beta$, and let $r$ be the path obtained from $p$ by adding $\neg \alpha$ and $\neg \beta$. Either $\alpha$ and $\beta$ are both true on $M$, or $\alpha$ and $\beta$ are both
false on $\mathcal{M}$, by clause 7 of §9.4.2. Thus either $\alpha$ and $\beta$ are both true on $\mathcal{M}$, or $\neg \alpha$ and $\neg \beta$ are both true on $\mathcal{M}$, by clause 2 of §9.4.2. So either there is a model on which every proposition on $q$ is true, or there is a model on which every proposition on $r$ is true. Therefore the tree rule for unnegated biconditional is truth-preserving. [Q p.71]

6. Let $p$ be a path featuring $\neg (\alpha \leftrightarrow \beta)$. Suppose there is a model $\mathcal{M}$ on which every proposition on $p$ is true. Let $q$ be the path obtained from $p$ by adding $\alpha$ and $\neg \beta$, and let $r$ be the path obtained from $p$ by adding $\neg \alpha$ and $\beta$. We know that $(\alpha \leftrightarrow \beta)$ is false on $\mathcal{M}$, by clause 2 of §9.4.2. So either $\alpha$ is true on $\mathcal{M}$ and $\beta$ is false on $\mathcal{M}$, or $\alpha$ is false on $\mathcal{M}$ and $\beta$ is true on $\mathcal{M}$, by clause 7 of §9.4.2. So either $\alpha$ and $\neg \beta$ are true on $\mathcal{M}$, or $\neg \alpha$ and $\beta$ are true on $\mathcal{M}$, by clause 2 of §9.4.2. So either every proposition on $q$ is true on $\mathcal{M}$, or every proposition on $r$ is true on $\mathcal{M}$. So either there is a model on which every proposition on $q$ is true, or there is a model on which every proposition on $r$ is true. Therefore the tree rule for negated biconditional is truth-preserving. [Q p.71]

7. Let $p$ be a path featuring $\neg \neg \alpha$. Suppose there is a model $\mathcal{M}$ on which every proposition on $p$ is true. Let $p'$ be the path obtained from $p$ by adding $\alpha$. We know that $\neg \alpha$ is false on $\mathcal{M}$, by clause 2 of §9.4.2. And so we know that $\alpha$ is true on $\mathcal{M}$, again by clause 2 of §9.4.2. So there is a model on which all propositions on $p'$ are true. Therefore the tree rule for negated conditional is truth-preserving. [Q p.71]

Answers 14.1.3.1

1. $\alpha$ is of the form $(\beta \land \delta)$; so the formula $\neg \alpha$ which we are considering is of the form $\neg (\beta \land \delta)$. Then $\neg \beta$ or $\neg \delta$ also occurs on $p$. The complexities of these wffs are less than the complexity of $\neg (\beta \land \delta)$, so by the induction hypothesis, whichever of them is on $p$ is true on $\mathcal{M}$. So $\neg (\beta \land \delta)$ is also true on $\mathcal{M}$. [Q p.71]

2. $\alpha$ is of the form $(\beta \rightarrow \delta)$; so the formula $\neg \alpha$ which we are considering is of the form $\neg (\beta \rightarrow \delta)$. Then $\beta$ and $\neg \delta$ also occur on $p$. The complexities of these wffs are less than the complexity of $\neg (\beta \rightarrow \delta)$, so by the induction hypothesis, $\beta$ and $\neg \delta$ are true on $\mathcal{M}$. So $\neg (\beta \rightarrow \delta)$ is also true on $\mathcal{M}$. [Q p.71]
3. \( \alpha \) is of the form \((\beta \leftrightarrow \delta)\); so the formula \(\neg \alpha \) which we are considering is of the form \(\neg(\beta \leftrightarrow \delta)\). Then either \(\beta\) and \(\neg \delta\), or \(\neg \beta\) and \(\delta\), also occur on \(p\). The complexities of all these wffs are less than the complexity of \(\neg(\beta \leftrightarrow \delta)\), so by the induction hypothesis, whichever pair of them is on \(p\), both formulas in the pair are true on \(M\). Either way, \(\neg(\beta \leftrightarrow \delta)\) is also true on \(M\). \[Q \text{ p.71}\]

4. \( \alpha \) is of the form \(\exists x \beta\); so the formula \(\neg \alpha \) which we are considering is of the form \(\neg \exists x \beta\). Then \(\forall x \neg \beta\) also occurs on \(p\). By the clause earlier in step (III) covering the case of wffs on \(p\) whose main operator is the universal quantifier, \(\forall x \neg \beta\) is true on \(M\). So by the reasoning in §10.1.1 (which establishes that \(\neg \exists x \beta\) and \(\forall x \neg \beta\) are true and false in exactly the same models), \(\neg \exists x \beta\) is also true on \(M\). \[Q \text{ p.71}\]

5. \( \gamma \) is of the form \((\alpha \leftrightarrow \beta)\). Then either \(\alpha\) and \(\beta\), or \(\neg \alpha\) and \(\neg \beta\), also occur on \(p\). (i) Suppose it is the former pair. The complexities of \(\alpha\) and \(\beta\) are less than the complexity of \((\alpha \leftrightarrow \beta)\), so by the induction hypothesis \(\alpha\) and \(\beta\) are true on \(M\). So by the rule governing the truth of biconditionals in models, \((\alpha \leftrightarrow \beta)\) is also true on \(M\). (ii) Suppose it is the latter pair. The complexities of \(\neg \alpha\) and \(\neg \beta\) are not necessarily less than the complexity of \((\alpha \leftrightarrow \beta)\): if \(\beta\) is an atomic wff (i.e. it has complexity 0), then \(\neg \alpha\) and \((\alpha \leftrightarrow \beta)\) have the same complexity; if \(\alpha\) is an atomic wff, then \(\neg \beta\) and \((\alpha \leftrightarrow \beta)\) have the same complexity. If neither \(\alpha\) nor \(\beta\) is atomic, then the complexities of \(\neg \alpha\) and \(\neg \beta\) are less than the complexity of \((\alpha \leftrightarrow \beta)\); so by the induction hypothesis \(\neg \alpha\) and \(\neg \beta\) are true on \(M\); and so by the rule governing the truth of biconditionals in models, \((\alpha \leftrightarrow \beta)\) is also true on \(M\). If one or both of \(\alpha\) or \(\beta\) is atomic, we need to reason in a way similar to that used in the clause earlier in step (III) covering the case of wffs on \(p\) whose main operator is the conditional. \[Q \text{ p.71}\]

8. \( (\neg Fb \rightarrow b = a) \rightarrow Fb \)  
9. \( Fb \)  

5. Sketch of answer: Adding new axioms does not affect the proof of DT in §15.1.1.1 (provided we retain (MP) and the existing axioms which feature in the proof). Adding new rules does affect the proof: each rule requires separate treatment in the induction step. For the rule (MP), the treatment of it in the induction step employs axiom (A2) (see pp.394–5). For the rule (Gen), the treatment of it in the induction step must employ axiom (A5). But (A5) includes a restriction (i.e. “\( \alpha \) contains no free \( x \)”). This means that only uses of (Gen) with a corresponding restriction (i.e. the rule is not applied “using a variable which is free in \( \beta \)” can be handled. [Q p.73]

(xii) 1. \( \forall x Fx \)  
2. \( \forall x Fx \rightarrow Fy \) (A4)  
3. \( Fy \)  
4. \( \forall y Fy \)  
5. \( \forall x Fx \vdash \forall y Fy \)  
6. \( \vdash \forall x Fx \rightarrow \forall y Fy \) 5, DT

- Rules of $N_1$ reformulated in stack style:

  → **introduction:**

  \[
  [\alpha]_n \\
  \vdots \\
  \beta \\
  \frac{\alpha \to \beta}{\alpha \to \beta} (\to I)_n
  \]

  → **elimination:**

  \[
  \frac{\alpha \to \beta}{\beta} (\to E)
  \]

  ∧ **introduction:**

  \[
  \frac{\alpha}{\alpha \land \beta} (\land I)
  \]

  ∧ **elimination:**

  \[
  \frac{\alpha \land \beta}{\alpha} (\text{or } \beta) (\land E)
  \]

  ¬ **introduction:**

  \[
  [\alpha]_n \\
  \vdots \\
  \beta \\
  \frac{\neg \beta}{\neg \alpha} (\neg I)_n
  \]

  ¬ **elimination:**

  \[
  [\neg \alpha]_n \\
  \vdots \\
  \beta \\
  \frac{\neg \beta}{\neg \alpha} (\neg E)_n
  \]

  ∨ **introduction:**

  \[
  \frac{\alpha \lor \beta}{\alpha \lor \beta} (\lor I)
  \]

299
\( \lor \) elimination:

\[
\begin{array}{c}
\alpha \\
\vdots \\
\beta \\
\gamma \\
\gamma \\
\hline
\alpha \lor \beta \\
\hline
(\lor E)_n
\end{array}
\]

repetition (R):

\[
\begin{array}{c}
\alpha \\
\hline
\beta \\
\hline
\alpha
\end{array}
\]

(R)

(This is the analogue of repetition inward (RI). We need this rule to facilitate certain applications of \((-I)\) and \((-E)\); see how it is used in the answers below. Not every stack-style natural deduction system requires this rule. For example, it is not used in the system in Dirk van Dalen, Logic and Structure [Springer, Berlin, fourth edition, 2004], which is a stack form of something similar to system \(N_5\) in the text pp.412–3.)

- Answers to Question 1, reformulated in stack style:

\beta \\
\hline
\beta \\
\hline
\vdots \\
\alpha \\
\end{array}
\]

\[\triangleright \alpha \leftrightarrow \beta\]

Elimination:

\[\alpha \leftrightarrow \beta\]

\[\alpha \quad \beta \quad \alpha \text{ (or } \beta\text{)}\]

\[\triangleright \beta \text{ (or } \alpha\text{, if } \beta\text{ above)}\]
Answers 15.3.3

1. (i) (a) \( \{\alpha\} \Rightarrow \emptyset \) holds logically [Q p.75]
   (b) \( \{\alpha\} \Rightarrow \emptyset \) does not hold logically [Q p.75]

(ii) (a) \( \{\alpha, \beta\} \Rightarrow \emptyset \) does not hold logically [Q p.75]
   (b) \( \{\alpha\} \Rightarrow \{\beta\} \) and \( \{\beta\} \Rightarrow \{\alpha\} \) both hold logically [Q p.75]

2. No answers supplied. [Q p.75]

3. No answers supplied. [Q p.75]

4. 
\[
\begin{align*}
\frac{\{\alpha, \beta\} \cup \Gamma \Rightarrow \Delta \quad \Gamma \Rightarrow \Delta \cup \{\alpha, \beta\}}{\{\alpha \leftrightarrow \beta\} \cup \Gamma \Rightarrow \Delta} & \quad (\leftrightarrow \Rightarrow) \\
\frac{\{\alpha\} \cup \Gamma \Rightarrow \Delta \cup \{\beta\} \quad \{\beta\} \cup \Gamma \Rightarrow \Delta \cup \{\alpha\}}{\Gamma \Rightarrow \Delta \cup \{\alpha \leftrightarrow \beta\}} & \quad (\Rightarrow \leftrightarrow) \\
\end{align*}
\]

5. 
\[
\begin{array}{c}
\beta \\
\alpha \quad \neg \alpha
\end{array}
\]
